

2025 Summer Student Volunteer Program

National Weather Service Houston/Galveston

Considering a career in the National Weather Service?

Current meteorology or atmospheric science students are invited to apply to the 2025 Student Volunteer Program at the National Weather Service Houston/Galveston. We have hosted many students in the past, including a number of current NWS forecasters. Our program will provide a glimpse into a career with the NWS as well as help you develop your operational forecasting skills.

Program requirements

- Currently enrolled ***in a meteorology or atmospheric science degree program*** (undergraduate and graduate students are both welcome to apply)
- Students will ideally be based in the Greater Houston area, as we are not able to provide housing accommodations for the program. Our office is located in League City.

We currently anticipate selecting 3-4 students for the program this summer depending on the availability of office staff. Students will spend 2 weeks at the office, developing their skills in all aspects of the forecast process. Additionally, we plan to schedule trips to some of the organizations that we work with, such as the CWSU (Aviation Weather) at Bush Airport and the NASA Spaceflight Meteorology Group.

Applications consist of a **resume, a few short essay questions, and contact information for 1-2 references.** Hours can be flexible based on your travel time and other school/work commitments. We plan to notify accepted students by the end of March.
