Winter Storm	

An arctic cold front moved across northwest Indiana during the late afternoon and early evening of December 22nd. Temperatures fell from the lower to middle 30s into the single digits within hours. Snow quickly spread across the region with roads becoming snow covered. The snow tapered off to snow showers in the evening and snow showers continued through the afternoon of December 23rd. Total snowfall amounts were generally in the 1 to 3 inch range with an area of 3 to 5 inches near Lake Michigan. Winds gusted as high as 55 mph through the morning of December 23rd and continued gusting to 40 mph through that evening producing widespread blowing snow and near whiteout conditions in many areas, especially in rural and open areas. Blizzard conditions were widespread across Porter County during much of December 23rd.

An arctic cold front moved across northwest Indiana during the late afternoon and early evening of December 22nd. Temperatures were in the middle 30s ahead of the front and fell into the single digits within hours after the cold front passed. Low temperatures by the morning of December 23rd ranged from 5 below to 10 below zero. High temperatures on December 23rd remained in the low single digits below zero. Winds gusted as high as 55 mph through the morning of December 23rd and continued gusting to 40 mph through the evening of December 23rd. The combination of strong winds and sub zero temperatures produced wind chills between 30 below and 42 below zero. While temperatures slowly warmed to near zero by the morning of December 24th, winds continued gusting to 35 mph. Wind chills finally warmed above 20 below zero by the late morning of December 24th.
