

May 25th-May 27th Severe Weather

**Austin - San Antonio
Weather Forecast Office**

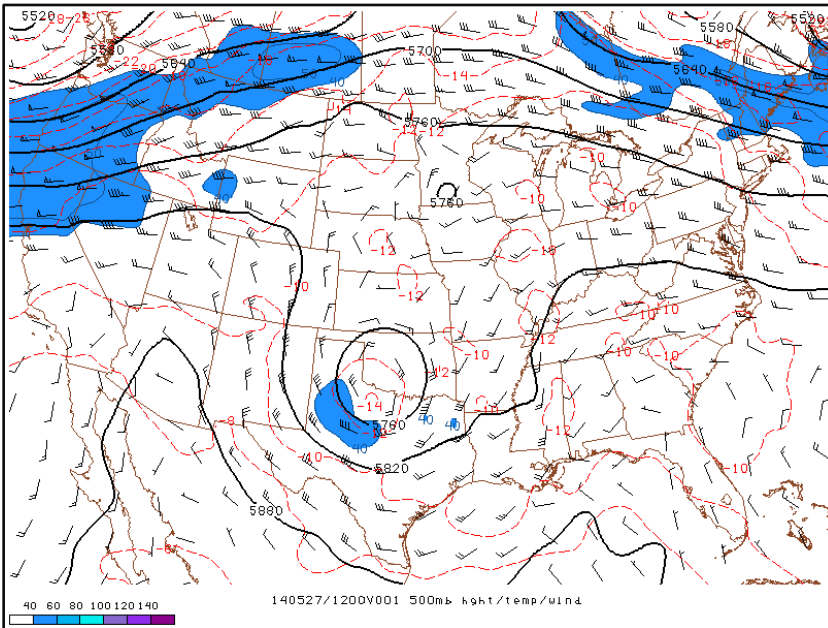

Synoptic Set Up - Synopsis

The atmospheric features producing this multi-day event were somewhat unusual for late spring. A slow-moving, cutoff low moved from the southwest U.S. across the southern Plains. This kept most of Texas in a favorable position for the following features to play a role in the development of rounds of strong to severe thunderstorms.

The 300 mb chart (Figure 1) shows the upper low centered over southwest Oklahoma. The blue shading are Jet Stream winds greater than 60 knots. The split of two jet streaks (areas of faster winds moving through the overall Jet Stream flow – like paddling a canoe to move faster than the general downstream flow of water), allows for divergence (the purple lines). Divergence is air moving away from a point (in all horizontal directions). Since air cannot replace the leaving air at the same level, it must come from above or below. Above is the stratosphere, which generally doesn't interact with the troposphere (lower part of the atmosphere). Thus, divergence at 300 mb indicates air must be rising from below – which strongly supports thunderstorm development.

Synoptic Set Up - Synopsis

The 500 mb chart (Figure 2) also shows the upper low centered over southwest Oklahoma – an indication that it is vertically stacked and likely to be slow moving. The blue shading are mid-level winds greater than 40 knots. This strength of winds at mid-levels is favorable for damaging winds from supercell storms, and can lead to squall lines and damaging straight-line winds.

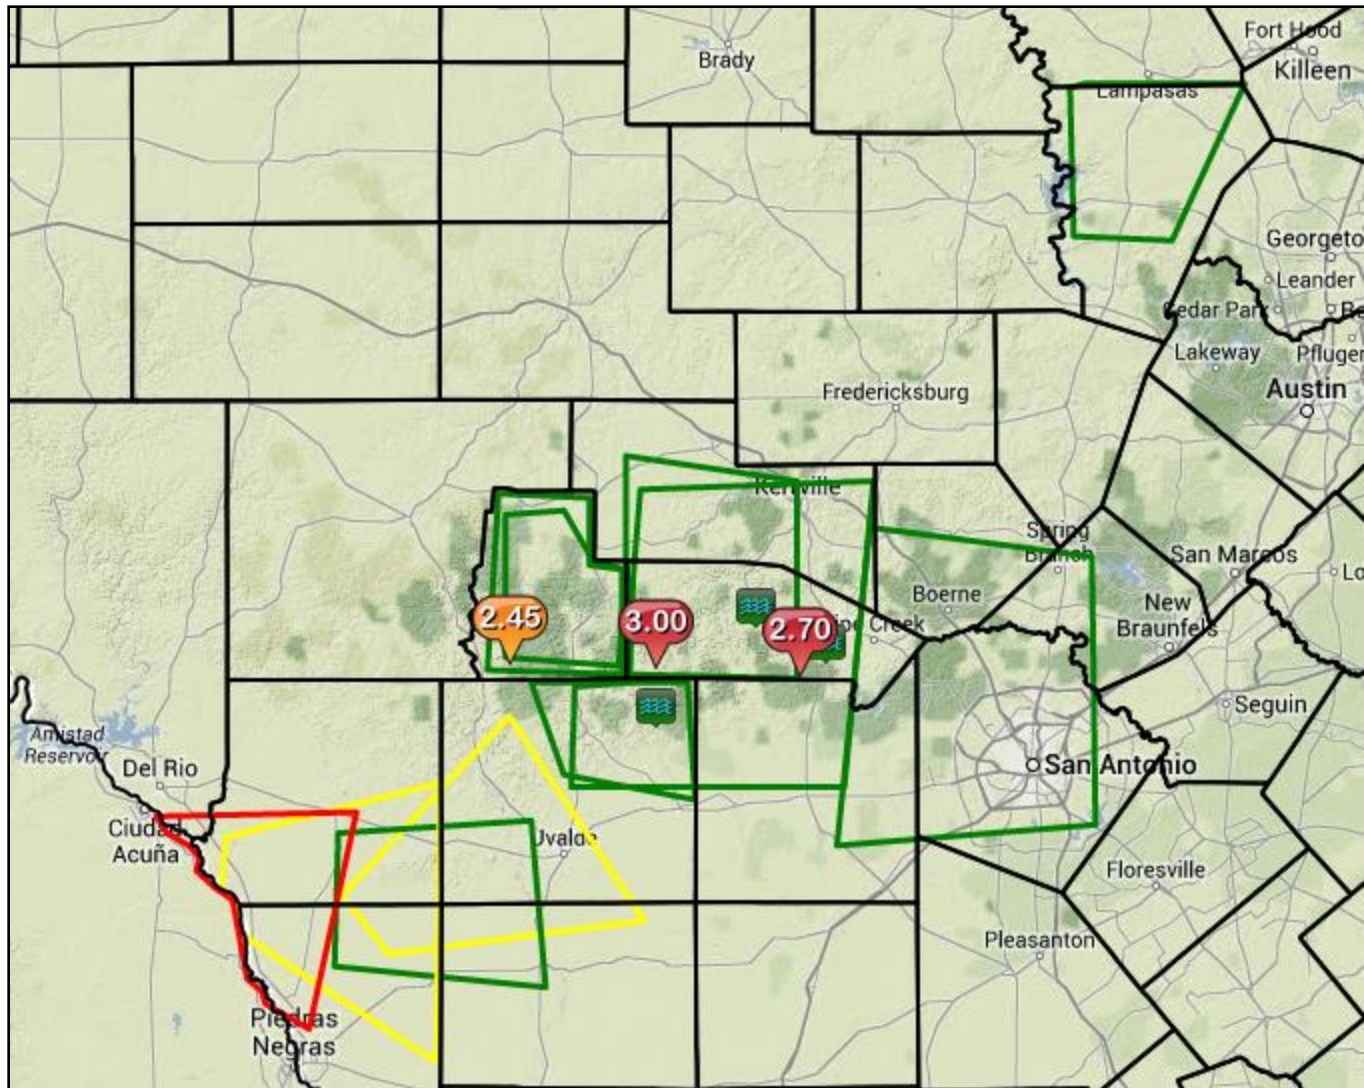

Meanwhile, precipitable water (a measure of condensing all of the water in a column from the ground up to space, Figure 3) shows values of 1.5 to 1.9 inches across south central Texas. 1.9 inches is around two standard deviations above – greater than 95% of all values for May. This is an indicator for heavy rain, and thus the potential for flooding.

Synoptic Set Up - Synopsis

This is a visible satellite image from 6 pm on Tuesday, May 27th (Figure 4). Note the single supercell storms across south central and southeast Texas, and the lines/clusters of storms over north central Texas.

May 25th - Flooding/Rio Grade Supercell

May 25th Mesoscale Discussions

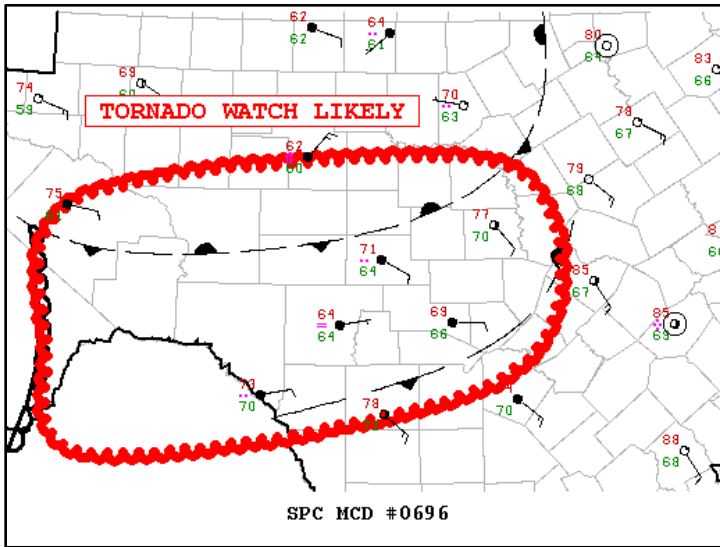

Issued by Storm Prediction Center in Norman, OK

[#701 at 3:43 pm](#) (click on link for discussion text)

[#703 at 6:12 pm](#) (click on link for discussion text)

Highlighted the risk of supercells that could produce very large hail, strong gusty winds, and a few isolated tornadoes.

Tornado Watch #185

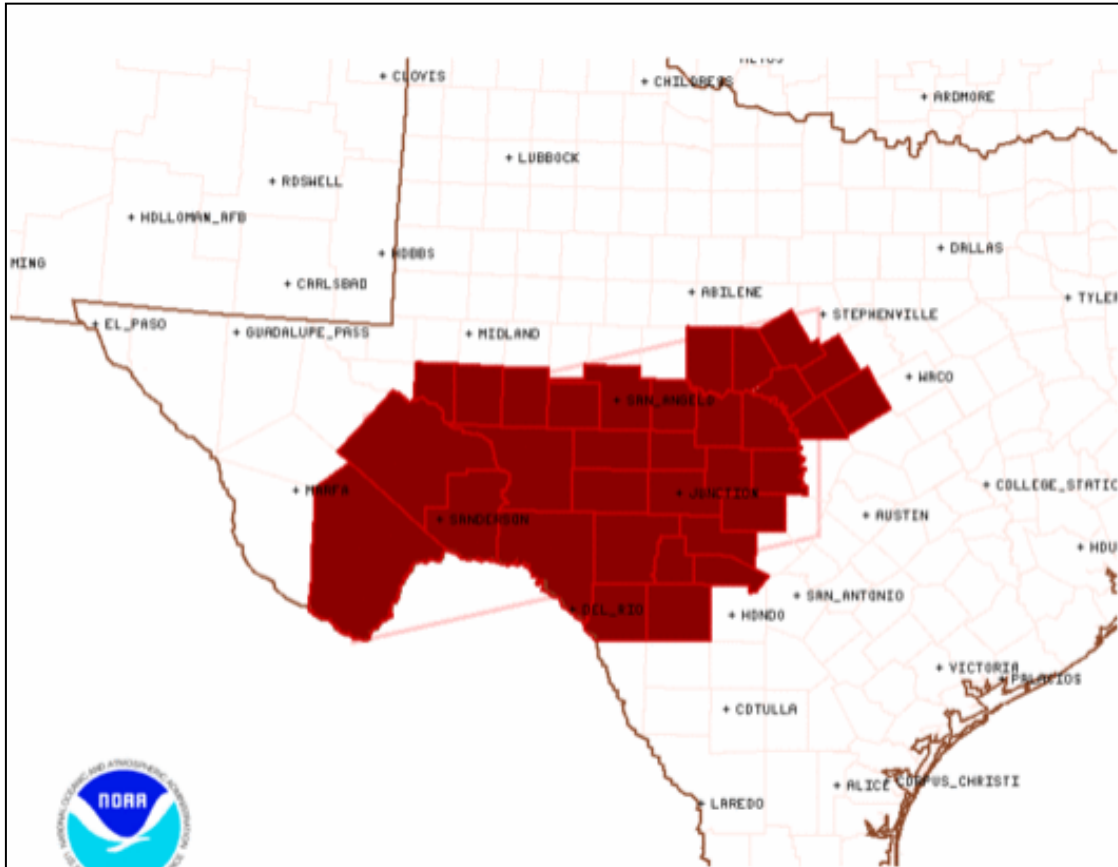

Issued by Storm Prediction Center in Norman, OK

Initially issued for Bandera, Edwards, Gillespie, Kerr, Kinney, Llano, Real, Uvalde, and Val Verde counties at 1:55 pm.

Maverick County was added at 3:11 pm and Zavala County was added at 7:18 pm

Primary Threats Included:

- Widespread large hail likely, isolated hail to 3" in diameter possible.
- Isolated significant damaging winds to 75 mph.
- A few tornadoes possible.

Tornado Watch # 185 - Valid from 155 PM until 1000 PM CDT

Flash Flood Watch #2

Issued by Austin/San Antonio
NWS Office in New Braunfels,
TX

Initially issued for Bandera,
Blanco, Burnet, Edwards,
Gillespie, Kendall, Kerr, Llano,
Real, and Val Verde Counties at
3:15 om on the 25th.

Bexar, Comal, Kinney, Medina,
and Uvalde Counties were
added at 9:22 pm on the 25th.

Widespread rains of 1-3 inches,
with isolated totals of 5-7
inches possible.

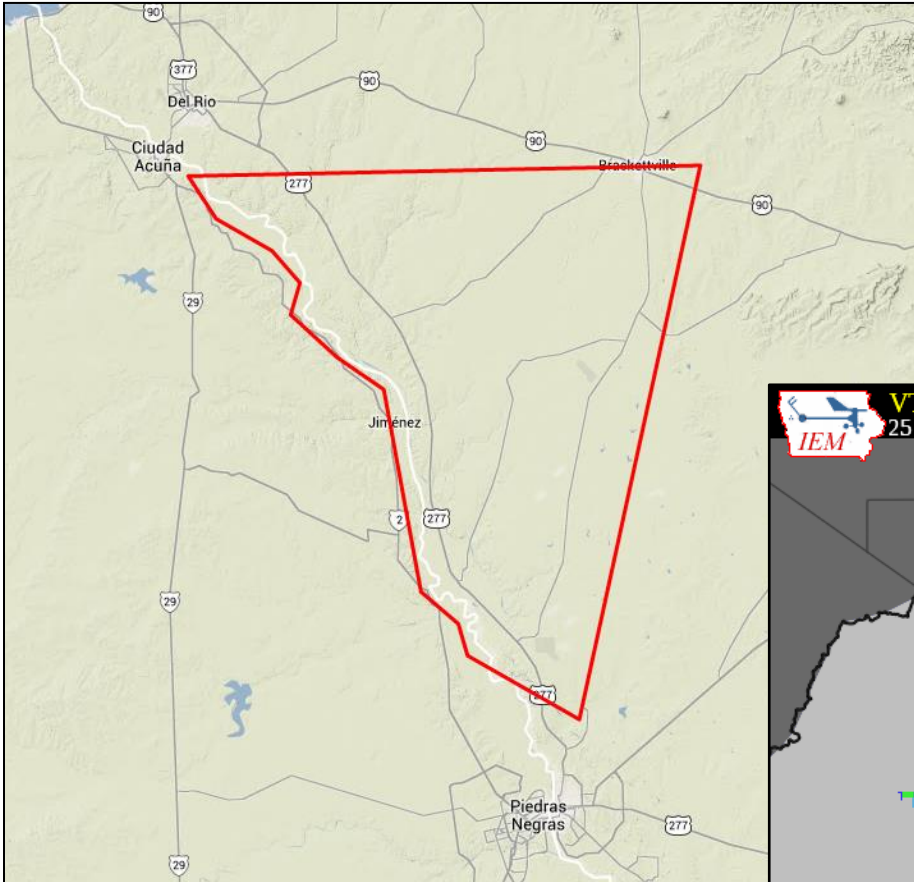

Issued for 7:00 pm on the 25th through 10:00 am on
Monday the 26th. Canceled at 7:21 am on the 26th.

Tornado Warning #1

Southwestern Kinney, Maverick, and Extreme Southern Val Verde Counties.

6:03 pm– 7:00 pm May 25th

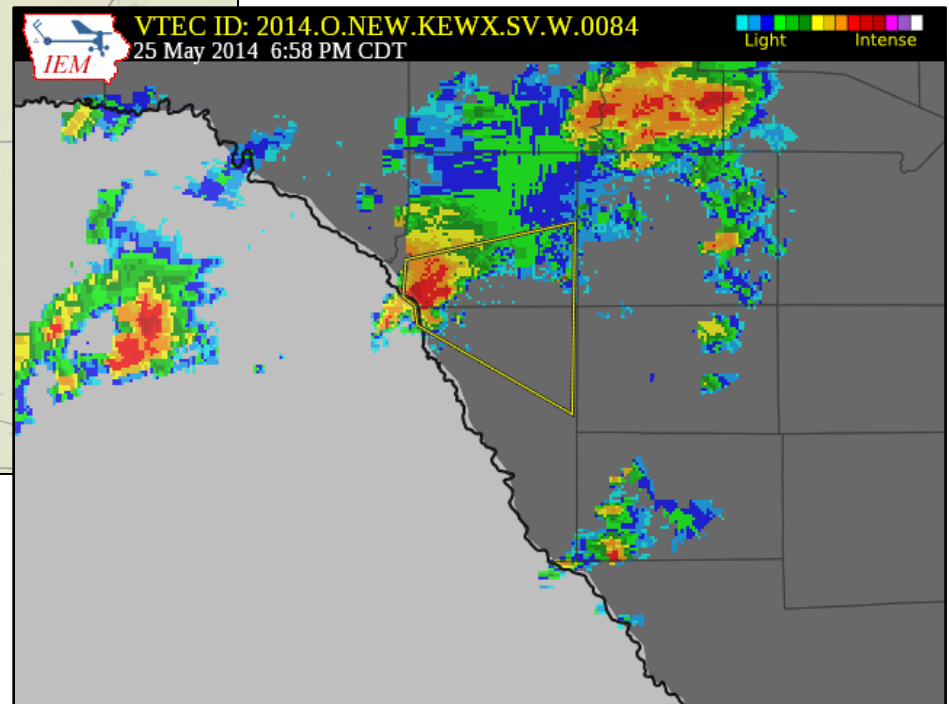

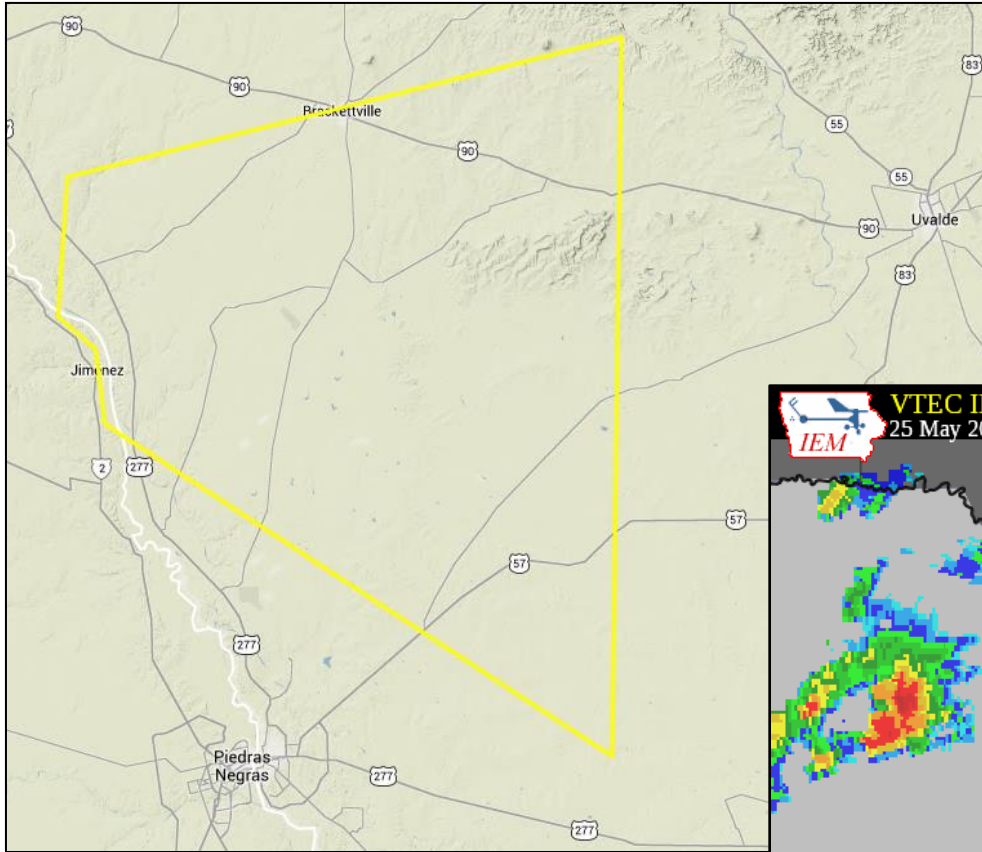

Reports:

Severe Thunderstorm Warning #84

Southern Kinney and Maverick Counties.

6:58 pm– 8:00 pm May 25th

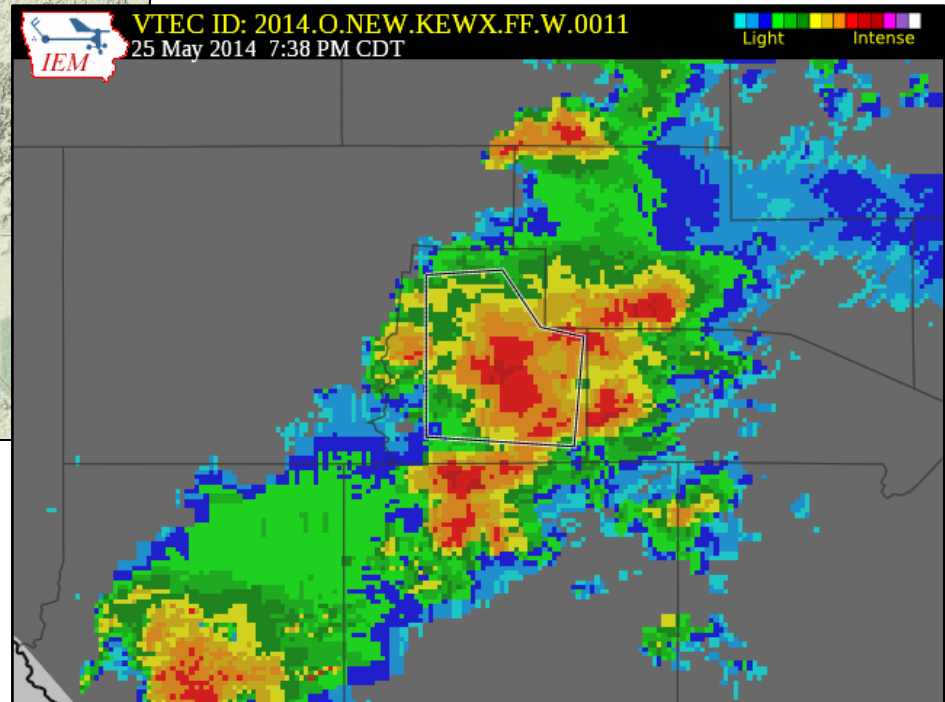

Reports:

Areal Flood Statements

Event	Product Issued	VTEC Expired	Locations	Area km**2
32	May 27, 2014 4:44 AM C...	May 27, 2014 7:30 AM C...	Williamson [TX], Travis [TX]	5592
33	May 27, 2014 7:13 AM C...	May 27, 2014 9:00 AM C...	Hays [TX], Guadalupe [TX], Comal [TX], Caldwell [TX], Bastrop [TX]	8847

2 different advisories issued between 4:44 am on May 27, 2014 through 7:13 am on May 27, 2014.

Typically issued for flooding that develops more gradually, usually from prolonged and persistent moderate to heavy rainfall. They indicate minor flooding problems, and are a good transition product as flooding increases.
