IMPACTS:	HWY 2	SUN 24	MON 25	TUE 26	WED 27
<ul style="list-style-type: none"> - Heavy snowfall - Blowing snow and Visibility Restrictions <1/2SM - Gusting winds / potential blizzard conditions - Low ceilings and ice 	AM				
	PM				
Comments:					
Forecasters		<p>Forecast backing off slightly from previous matrix forecast, low pressure moves in Sunday into Tuesday. As we get closer looking more like 2-8 inches of snow possible with the heavier snowfall looking to be more south of station. Sunday morning flurries will begin with winds around 10G15KT and low impacts to travel. Winds and snow will gain in significance as we progress Sunday night, with the worst conditions expected Sunday evening and all of Monday. These conditions include blowing snow, gusting winds around 35KTs, and visibility restrictions down to <1/2SM providing the base with near blizzard conditions. This can cause heavy snow accumulation and icy roads, in which no travel is advised. Threats will progressively taper down Tuesday into Wednesday. Officially coming to a close by Wednesday morning. The system is currently forecasted to have the majority of the heavier snowfall to our south but will continue monitoring for any shifts which could leave us with more significant snowfall.</p>
