Storm Data and Unusual Weather Phenomena - January 2024

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	01/11/24 02:39 PST		2K	Strong Wind (MAX 39 kt)
	01/11/24 02:53 PST		0	

A cold upper trough moved across central California during the evening of January 10 and the early morning of January 11. This system brought another half inch to an inch of liquid precipitation to the Sierra Nevada and adjacent foothills north of Kings Canyon with many locations picking up 5 to 10 inches of new snow with a few SNOTELs estimating a foot of new snowfall. Areas further south in the Sierra Nevada and much of the Tehachapi Mountains picked up between a quarter and a half inch while much of the San Joaquin Valley received between a tenth and a quarter inch of rainfall. This system also produced a period of strong wind gusts with several stations in the Tehachapi area and the Mojave Deserts slopes measuring gusts exceeding 50 mph and a few low impact indicator sites reporting gusts exceeding 75 mph.

01/12/24 02:00 PST	0	Frost/Freeze
01/13/24 08:00 PST	0	

A cold and dry airmass settled in over the San Joaquin Valley behind the winter storm which moved to the east of the area on January 11. With clear skies, light winds and inversion conditions, temperatures dropped below the freezing mark across most of the San Joaquin Valley during the morning on January 12. Increasing clouds spread southward into the valley during the morning of January 13 which kept minimum temperatures above the freezing mark across the central San Joaquin Valley. Portions of the south valley dropped below the freezing mark again during the morning of January 13 as skies remained mainly clear until late morning.

01	1/13/24 01:00 PST	0	Winter Weather	
01	1/14/24 07:00 PST	0		

A low pressure system that moved through the Pacific Northwest on January 13 brought precipitation as far south as central California between the early morning of January 13 and the morning of January 14. While precipitation amounts were fairly light, the system did produce 4 to 8 inches of snow above 7000 feet in the Yosemite Park area. Several stations further south picked up an estimated 1 to 4 inches of snowfall above 7000 feet. Rainfall amounts were generally a tenth of an inch or less in the San Joaquin Valley and West Side Hills and a tenth to a quarter inch in the Sierra Nevada and adjacent foothills.

(CA-Z302) MERCED-MADERA-MENDC PORTERVILLE - REEDLEY)TA, (CA-Z307) FRESNO - CLOVIS, (CA-Z311)	HANFORD - CORCORAN	N - LEMOORE, (CA-Z312) VISALI
	01/15/24 00:50 PST	0	Dense Fog
	01/15/24 10:25 PST	0	

High pressure moved into central California during the morning of January 15. With clearing skies, light winds and inversion conditions, areas of dense fog formed in the San Joaquin Valley and impacted travel along SR 99 between Visalia and Madera and also along the SR 198 corridor between Visalia and Hanford. The fog lifted into a stratus deck by late morning.

(CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE	- REEDLEY, (CA-Z314) BAKERSFIELD, (CA-Z334) TEHACHAPI	
01/15/24 18:15 PST	0	Dense Fog	
01/16/24 01:40 PST	0		

Areas of dense fog formed in the south San Joaquin Valley and the valley facing slopes of the Tehachapi Mountains during the evening of January 15 lowering visibility in some locations to be low a quarter mile. Enough mixing took place during the early morning of January 16 for the fog to lift into a low cloud deck which minimized travel impacts by the morning commute.

(CA-Z331) SOUTH END OF THE UPPER SIERRA, (CA-Z332) KERN RIVER VALLEY		
01/17/24 06:00 PST	0	High Wind (MAX 65 kt)
01/17/24 06:20 PST	0	

A low pressure system that moved across northern California during the evening of January 16 and the early morning of January 17 brought some light precipitation to the area with much of the Sierra Nevada picking up between a quarter and a half inch of liquid precipitation with the snow level near 7000 feet. Several SNOTELs picked up an estimated 3 to 6 inches of new snowfall. Most of the central San Joaquin Valley picked up between a tenth and a quarter inch of rain while the south valley and the Kern County Mountains and Deserts generally had a tenth of an inch or less. This system also produced a brief period of strong wind gusts in the Kern County Mountains and Deserts with several stations reporting gusts exceeding 40 mph and a few locations measuring gusts exceeding 55 mph.

Storm Data and Unusual Weather Phenomena - January 2024

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z	314) BAKERSFIELD			
	01/31/24 19:15 PST		3K	Strong Wind (MAX 35 kt)
	01/31/24 20:34 PST		0	

A strong low pressure system approached central California on January 31. Gusty southerly winds ahead of this system resulted in some tress being downed and several reports of gusts exceeding 40 mph. Many wind prone locations in the higher elevations measured gusts exceeding 60 mph.
