

Drought Information Statement for Central and Southeast Illinois

Valid September 26, 2024

Issued By: WFO Lincoln, IL

Contact Information: nws.lincoln@noaa.gov

- The next update will be Thursday, October 3, if conditions persist or worsen.
 - Please see all currently available products at <https://drought.gov/drought-information-statements>.
 - Please visit <https://www.weather.gov/ilx/DroughtInformationStatement> for previous statements.
 - Please visit <https://www.drought.gov/drought-status-updates> for regional drought status updates.
-
- Drought conditions continue across parts of the state though some improvement has occurred in southeast Illinois. Beneficial rains are expected near and south of I-70 late this week into the weekend as the remnants of Hurricane Helene approach.

Data Valid: 09/24/24

Precipitation

Last 30 days

- Much of the area has only seen 50% or less of their normal rainfall over the last 30 days.
- Recent rain did bring some improvements with some spots near the I-72 corridor approaching 100% of normal rainfall.

Summary of Impacts

Links: See/submit [Condition Monitoring Observer Reports \(CMOR\)](#) and view the [Drought Impacts Reporter](#)

Hydrologic Impacts

- The Illinois River Carriers Association has noted that there is some constriction of the navigable channel along the Illinois River due to low water levels.
- Pond levels are running low and many creeks have stopped flowing.

Agricultural Impacts

- Crops are drying rapidly, but still standing well.
- Brown spots are developing in lawns.
- Trees are dropping leaves with little color change.

Fire Hazard Impacts

- The recent hot and dry conditions do come with a field fire risk as farmers run hot equipment through dry fields during harvest.

Other Impacts

- There are no known impacts at this time.

Mitigation Actions

- Some burn bans may still be in place. Please refer to your municipality for the latest information specific to your area.

Hydrologic Conditions and Impacts

- Streamflows are normal in many areas across the state with some running above normal in far northern and southwest Illinois. Below normal flow (10th-24th percentile) continues along the Illinois and Wabash Rivers with spots of well-below normal flow (below 10th percentile) along portions of the Illinois River.

Tuesday, September 24, 2024

Explanation - Percentile classes							
Low	<10	10-24	25-75	76-90	>90	High	No Data
	Much below normal	Below normal	Normal	Above normal	Much above normal		

Image Caption: USGS 7 day average streamflow HUC map valid September 24, 2024.

Agricultural Impacts

- Rapidly drying crops has led to ahead of schedule harvesting. However, the impact to pastures has been greater, with the need to supplement feed and hay coming earlier than expected.

Fire Hazard Impacts

Link to [Wildfire Potential Outlooks from the National Interagency Coordination Center](#).

- Fire hazard impacts are limited as conditions remain typical for early fall. However, field fire risk is a concern as farmers run hot equipment through dry fields.

Seven Day Precipitation Forecast

- Beneficial rainfall amounts of 1-2+ inches are possible near and south of I-70 as the remnants of Hurricane Helene approach the Ohio Valley.

Check weather.gov/ilx for updated forecast, as this packet is not regularly updated.

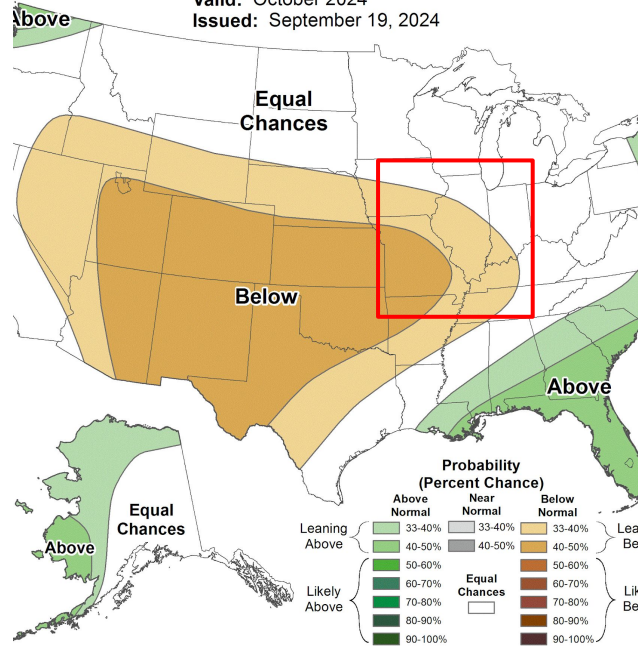

Long Range Outlooks

The latest monthly and seasonal outlooks can be found on the [CPC homepage](#)

- Current outlooks for the month of October indicate equal chances of above or below normal temperatures, and favor below normal precipitation chances (33-40%).

Issued: September 19, 2024

Drought Outlook

The latest monthly and seasonal outlooks can be found on the [CPC homepage](#)

- Drought conditions are favored to persist across portions of west-central and southern IL. However, heavy rain associated with the remnants of Hurricane Helene *should* continue to eat away at drought conditions south of I-70.
