

Portable Generators

Portable electric generators like the one pictured above have become very popular. They can be an excellent piece of equipment to have should you lose electric power for an extended period of time. However they must be used safely and properly. A small generator can usually only run one major appliance at a time. It is also very important to place the generator **OUTSIDE!** The exhaust from the engine emits deadly **carbon monoxide gas**. Make sure you read the manual carefully and follow all the recommended safety precautions.
