

Using Aircraft Diversions to Determine the Most Impactful Weather at Airports

MICHAEL MATHEWS

Washington CWSU - NWS, Leesburg, Virginia

ADAM DAUM

New York CWSU - NWS, Ronkonkoma, New York

“No matter what time storms move through the northeast, anticipating diversion risk is critical to an airline. While diversions can never be completely avoided – especially in a complex environment like the New York airspace – having predictive information for diversion risk allows us to make smart fueling decisions and handle preparations and contingency crew plans that can greatly mitigate customer and economic impacts when they do happen.”

-Tom Lloyd, Director System Operations, Strategy and Improvement at JetBlue Airways

As the volume of air traffic operations at major US airports increases, significant weather events have an increasing effect on safety, commerce, and the overall operational efficiency of the National Airspace System (NAS). In addition, each airport is uniquely impacted by weather phenomena making efficient planning all the more difficult. This study examines the worst (highest number of) diversion days at major U.S. airports to determine the weather factor at fault. The top twenty of these days were analyzed for each airport using historical FAA Operations and Performance Data from 2013 to 2022. Unsurprisingly thunderstorms in general are the greatest cause of high diversion days; however notable and valuable differences are observed at many airports. Additional analysis was done for the DC and NY Metros (IAD, DCA, BWI, JFK, LGA, EWR, HPN and TEB). This included finding the most impactful thunderstorm types (i.e. linear, single-cell, clusters), storm location relative to the terminal, storm timing, etc. This information, much like knowing the thresholds for how winter weather can impact a community, can be invaluable in the hands of a forecaster, FAA decision maker, and airline personnel determining whether or not a high impact event is in store for an airport.

High Impact Diversion Breakdown per Airport (based on the Top 20 highest diversion days from 2013-22) *Preliminary*

Rank by Diversions	Airport	Total Diversions	Diversion Cause
