Weather Summary

Two consecutive low pressure system brought Gulf moisture into the Mid-Atlantic region and produced rain showers and thunderstorms. The first low formed over the Southeastern U.S. on June 7. It produced widespread rainfall totals of 1 to 3 inches. The second low pressure system formed over California on June 4. It moved across the Southern U.S. and then northward along the Eastern Seaboard. The second low pressure system produced an additional 1 to 2 inches of rainfall in parts of New Jersey on June 9 - 10.
