

Flood Event of 2/9/1995 - 2/9/1995

North Branch Potomac

Site	Flood Stage	Date	Crest	Flow	Category	Basin	Stream	County of Gage	County of Forecast Point
Kitzmiller	9.00	2/9/1995	11.00	-9,999	Moderate	North Branch Potomac	Potomac River	Garret	Garret

Weather Summary

During the early part of February, a huge mass of Arctic air crossed over the Great Lakes and prompted colder than average temperatures as well as many snow storms for nearly two weeks between the 4th and 14th. New York was hit the hardest with up to seven feet of snowfall after the storm system(s) passed. Little to no accumulation was determined from the storm to be associated with the flooding. Ice seems to be the main cause of the flooding due to ice related incidents.
