Weather Summary

Heavy rains on the 27th led to minor flooding across the region, but all of the river levels were able to drop below flood stage on the 28th as an area of localized high pressure temporarily took hold of the region. However, the front that produced the heavy rainfall totals on the 27th stalled out just off of the coast before eventually drifting back over land on the 29th as different occluded front moved in from the east. These two systems dumped on average another inch of rain over an already saturated area that led to minor flooding across parts of New Jersey, eastern Pennsylvania, and southeastern New York.

Crest Statistics and Flood Information

Second flood of 2 that occurred in Oct, 2003

Twenty-First flood of 24 that occurred in 2003

Number of Floods at MARFC Forecast Points - 8

Number of Floods Cresting in Minor Range - 7

Number of Floods Cresting in Moderate Range - 0

Number of Floods Cresting in Major Range - 0

Number of Floods Cresting in Missing Range - 1
