## Weather Summary

---

A southwest flow brought moist air and near to above normal temperatures to our New York basins for several days. A wave of low pressure spread showers and thunderstorms across the basins on April 7th. A stronger wave brought another round of showers and thunderstorms to the basins on the 8th. The final round of rain was from a cold front on the 9th. The off and on rain in combination with snowmelt led to minor flooding in our New York basins.
