Summary of Impacts

Links: See/submit [Condition Monitoring Observer Reports \(CMOR\)](#) and view the [Drought Impacts Reporter](#)

Hydrologic Impacts

- Stream flows remain low

Agricultural Impacts

- Dry weather has hampered small grain and fall hay seedings. Pasture conditions declined this week. Soil moisture is lower than normal.

Fire Hazard Impacts

- Tennessee Forestry reported a small increase in small fires across the area.

Other Impacts

- Stay tuned for future updates as drought is likely to worsen in many areas.

Mitigation Actions

- Please refer to your municipality and/or water provider for mitigation information.

Hydrologic Conditions and Impacts

- Streamflows have been below normal to much below normal for most areas.

Mednesday, October 25, 2023

GS

Explanation - Percentile classes							
Low	<10	10-24	25-75	76-90	>90	High	No Data
	Much below normal	Below normal	Normal	Above normal	Much above normal		

Image Caption: USGS 7 day average streamflow HUC map valid 10/25/2023

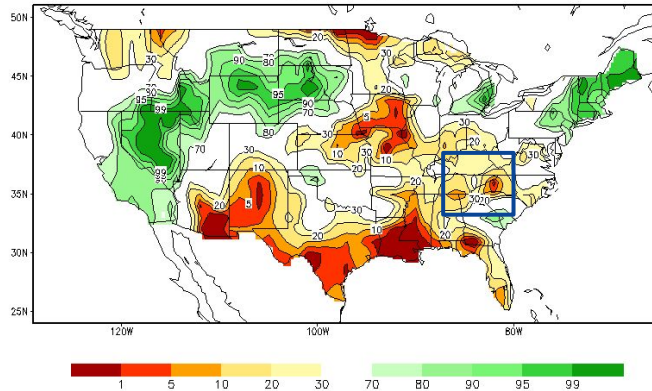

Agricultural Impacts

- Soil moisture is drier than normal.

Calculated Soil Moisture Ranking Percentile
OCT 25, 2023

Crop Moisture Index by Division
Weekly Value for Period Ending OCT 21, 2023
Short Term Need vs. Available Water in a Shallow Soil Profile

Seven Day Precipitation Forecast

- Some light precipitation is expected during the next 7 days – mainly on October 30 and November 1.
 - Overall amounts will be low with little impact on drought improvement.
 - Highest precipitation amounts will be across the northern Plateau, northeast Tennessee, southwest Virginia.

Valid November 2023

Drought Outlook

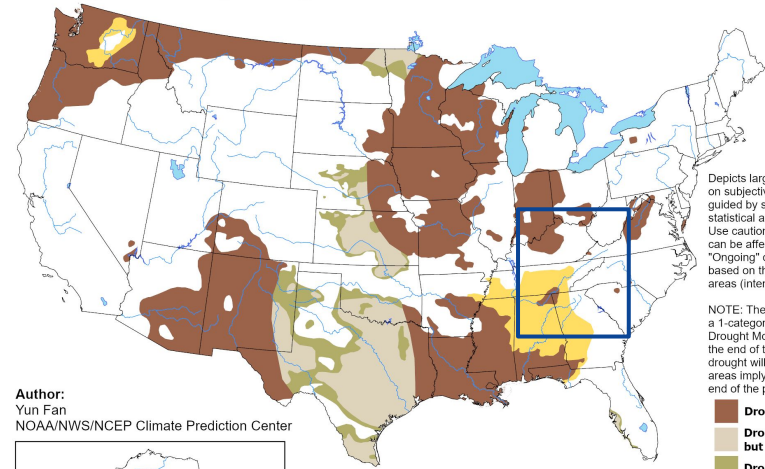

The latest monthly and seasonal outlooks can be found on the [CPC homepage](#)

- Drought development is likely to continue this month.

U.S. Monthly Drought Outlook

Drought Tendency During the Valid Period

Valid for October 2023
Released September 30, 2023

Depicts large-scale trends based on subjectively derived probabilities guided by short- and long-range statistical and dynamical forecasts. Use caution for applications that can be affected by short lived events. *Ongoing* drought areas are based on the U.S. Drought Monitor areas (intensities of D1 to D4).

NOTE: The tan areas imply at least a 1-category improvement in the Drought Monitor intensity levels by the end of the period, although drought will remain. The green areas imply drought removal by the end of the period (D0 or none).

Author:
Yun Fan
NOAA/NWS/NCEP Climate Prediction Center

- Drought persists
- Drought remains, but improves
- Drought removal likely
- Drought development likely
- No drought
