Service Change Notice 13-52
National Weather Service Headquarters Washington DC
722 AM EDT Tue Aug 20 2013

To: NOAA Weather Wire Service Subscribers
Other NWS Partners, Users and Employees

From: Craig Hodan
Chief, NWS Dissemination Systems Branch

Subject: New NOAA Weather Wire Service (NWS) During 2014

NWS is continuing the upgrade of NWS to disseminate weather products to the public. A new NWS will be commissioned during 2014. The new NWS will operate concurrently with the present NWS system until the NWS system contract ends March 2014, at the earliest. For the latest news and information about this change, please consult the Weather Wire website at:

<http://www.nws.noaa.gov/nws/newnws.html>

The new system will allow C-band satellite users to continue to use outdoor antennas they have in place, which will not require re-pointing but will require a new satellite receiver, new Low Noise Block Converter (LNB), and new or modified weather data processing/display software. Internet (Open Interface) users will need the new or modified processing/display software.

The current NWS system, operated under contract with Computer Sciences Corporation (CSC), will continue to operate into 2014. CSC may or may not continue Weather Wire satellite and open-interface services after government contract termination.

Updates will be posted on the NWS website as it become available. For more information, please contact:

Gregory Zwicker
NWS Program Manager
Operations Division
