From: Cyndie Abelman
 Chief, Aviation Services Branch

Subject: www.aviationweather.gov Design Refresh: Implementation Effective
1800 UTC Tuesday, March 25, 2014

Effective Tuesday, March 25, 2014, at 1800 Coordinated Universal Time
(UTC), the NWS Aviation Weather Center (AWC) will implement newly designed
webpages to:

www.aviationweather.gov and
www.aviationweather.gov/adds

These design improvements will affect the look and feel of the website,
but will not change the content. Users can examine the changes before
March 25, 2014 at

new.aviationweather.gov/ and
new.aviationweather.gov/adds

These changes are being implemented to bring the layout of the website up
to the standard set by www.weather.gov, released fall of 2012. The new
website will streamline the user access to the site and provide a common
look and feel for the web pages. The new webpages still use the Aviation
Digital Data Service (ADDS) database and products. The Geographic
Information System (GIS) maps introduced in the fall of 2013 are now the
primary displays of data replacing the Java applets. The design provides
the same functionality on a tablet as it does on the desktop.

The legacy webpages will remain on the web site until March 25, 2015 to
allow users to transition on their own and not break bookmarks.
You can find a tutorial on the changes to these AWC pages at:

new.aviationweather.gov/help/tutorial

If you have any questions about this change, please contact:
