### HAZARDS & IMPACTS

#### Lower Hudson Valley, Interior NE NJ, and Southern CT

- **Snow Accumulation:** 5 to 7 inches.
  - **Snowfall Rates:** 1"+/hr possible.
  - **Impacts:** Snow covered roads and difficult travel.

#### NYC, northeastern New Jersey, and Long Island

- **Snow/Wintry Mix:** Accumulating snow of 3 to 5 inches possible Saturday night into early Sunday morning. The snow may mix with sleet around midnight into early Sunday morning. There is also a chance for freezing rain early Sunday morning. Plain rain may mix in where temperatures briefly rise above freezing.
  - **Snowfall Rates:** Up to 1"/hr possible
  - **Impacts:** Snow, sleet, and slush covered roads and hazardous travel.

**Extended Outlook:** There is potential (30-50%) for another accumulating snow/wintry mix event Tuesday into Wednesday morning.

### NWS ALERTS

**Winter Storm Watch remains in effect 7pm Saturday to 10am Sunday**

### FORECAST CHALLENGES

- The watch may be converted to an Advisory across the NYC metro, portions of NE NJ, and Long Island if recent trends remain as any 6" amounts would be isolated.
- Location and duration of any heavy snow banding.
- Duration of freezing rain and whether or not surface temperatures rise above freezing across portions of the NYC metro and Long Island early Sunday morning.

### NEXT BRIEF

By 6 PM Friday.

# Probabilistic Snowfall Forecast

February 7, 2025  
4:42 AM

Local snow amounts could be close to these where heavy snow banding persists. Local 6" amounts possible down to the coast if wintry mix is limited.

Expect at least this much snow. Local snow amounts could be close to these levels if the storm trends north or wintry mix pushes further inland.
