

Final Report

**Interagency Memorandum of Understanding
Among The NEXRAD Program,
The WSR-88D Radar Operations Center,
The NWS Office of Hydrologic Development**

June 1, 2003 to May 31, 2004

**Feng Ding
Dong-Jun Seo
David Riley
Richard Fulton
David Kitzmiller**

**Hydrology Laboratory
Office of Hydrologic Development
NOAA National Weather Service**

October 20, 2004

Table of Contents

1. Verification Statistics for 1-Hour and 3-Hour Radar Precipitation Estimates With and Without Range Correction

- 1.1 Introduction
- 1.2 Precipitation Characteristics During the Experiment
- 1.3 Summary of Evaluation Results
- 1.4 Objective Evaluation of DPA/DPR Differences
- 1.5 Results of Range Correction Evaluation
- 1.6 Combined Effects of Mean-Field Bias and Range Corrections
- 1.7 Conclusions
- References
- Tables
- Figures

2. Convective-Stratiform Separation of Radar Reflectivity Fields for Real-Time Correction of Range-Dependent Biases in Radar Rainfall Estimates due to Vertically Nonuniform Profile of Reflectivity

- 2.1 Introduction
- 2.2 Identification of Separation Attributes
- 2.3 Estimation of Conditional Probability
- 2.4 Evaluation
- 2.5 Relationship Between Cloud-To-Ground Lightning and Convection Probability
- 2.6 Conclusions and Future Research Recommendations
- References
- Figures

3. Towards Probabilistic Quantitative Precipitation WSR-88D Algorithms: Preliminary Studies and Problem Formulation: Phase 2

University of Iowa

4. Towards Probabilistic Quantitative Precipitation WSR-88D Algorithms: Preliminary Studies and Problem Formulation: Phase 3

University of Iowa

5. Radar Rainfall Estimation for Flash Flood Forecasting in Small Urban Watersheds

Princeton University
