

RFC Verification Workshop
August 14-16, 2007
CBRFC
Salt Lake City, UT

Actions

- 1) Investigate the feasibility of having all RFCs provide 2.5 km QPE and QPF to be verified by NPVU. *Mary Mullusky*
- 2) There is an assumption that AWIPS hardware is adequate and thus will be the baseline for AWIPS II. This is not true for deterministic verification and more critically inadequate for ensemble verification. The hardware issue must be moved forward to AWIPS II. All RFCs should make current hardware inadequacies known to regions and headquarters. *All RFC verification focal points and HICs.*
- 3) Survey the RFC verification focal points to determine what they are archiving and where the archives are located. *NWS Hydrology Verification Team*
