Documentation
For
Run_bounce_informix, OB5 release
October 8, 2004

1.0 General Information

1.1 Program Description

This ksh script is for use by user root only. The script allows user root to shutdown both shefdecoders and oper's cron, then to stop and restart the Informix IDS, restart both shefdecoders and restart oper's cron.

1.2 Background

Developed by OHD/HL this past year for use on the awips development rfc archive system. It was determined this would be a handy script for the field offices to have.

1.3 Assumptions

This script assumes the RFC maintains all current changes in oper's cron in the file /rfc_arc/crons/adb_oper_crons.

2.0 User How-To

To run this application:
- rlogin ax or ssh ax
- su – root (user must have access to password for user root)
- cd /rfc_arc/scripts/sysadmin
- lrun_bounce_Informix
- exit (this will return you to your original login user)

3.0 Troubleshooting Information

If the script or application fails, contact the RFC Support Group.

4.0 Maintenance Information
