

# Documentation for writing out data in comma separated values or ascii text February 19, 2003

## 1.0 General Information

### 1.1 Application Description

The capability to write out data in comma separated values or ascii text format is available through the DatView application. This application is available through the arcmenu. Choosing option 1 in the arcmenu gets you to the DatView application.

1. `DatView -- view and edit archive data`

DatView comes up with several different windows. After choosing the data you want to view, go to the bottom of the DatView Text window. It has a box for Save Format. Comma delimited, ascii text, and SHEF encoded are the options available. Choose the format you want then click on the Save button. A window will come up allowing the user to choose the name and location for the output file. The default location is the users' home directory.
