

**U.S. Department of Commerce
National Weather Service Pittsburgh
Pittsburgh, PA**

September 3, 2024

Effective October 1, 2024, The National Weather Service intends to change flood stages for The Ohio River at Pittsburgh (PTTP1), the stream gage located at the confluence of the Monongahela and Allegheny rivers in the city of Pittsburgh. In coordination with local emergency management, it was determined that the impacts occurring at 22 feet (i.e the closure of the 10th Street Bypass) warranted the need to lower the flood stage to this height.

The new flood categories will be as follows:

1. New flood stage is 22.0 feet. The previous flood stage was 25.0 feet.
2. New moderate flood stage is 25.0 feet. The previous moderate flood stage was 27.0 feet.
3. New major flood stage is 28.0 feet. The previous major flood stage was 28.5 feet.

The National Weather Service welcomes feedback. If you have any questions or comments on the information included, please contact:
