Section I. Climate of Astoria

Geographical Overview	1
Climatological Summary	2
Station Observing History	3
Station Observation Equipment History	5

Section II. Temperatures Records and Data

Monthly and Daily Averages/Extremes and Normals.....	7
Daily Temperatures Records and Normals, by MONTH.....	9
Frequency of Maximum and Minimum Temperatures	21
Days per month of MAX Temperature of 90+, 80+, and <32, with Lows 32 or less....	22
Hot Spells and Cold Snaps.....	23
Consecutive Days with MAX Temp. 80°/90° or more, MIN Temp. 32°/20°or less.....	23
Monthly and Annual Average MAX temperatures	24
<i>Progression of 30-year climate normals for monthly MAX temperatures.....</i>	28
Monthly and Annual Average MIN temperatures	29
<i>Progression of 30-year climate normals for monthly MIN temperatures.....</i>	33
Monthly and Annual Average MEAN temperatures	34
<i>Progression of 30-year climate normals for monthly MEAN temperatures.....</i>	38
Top 5 Warmest and Coldest Months, Seasons and Years	39
Top 10 Coolest and Warmest Days (<i>high temperatures</i>).....	42
Top 10 Coldest and Mildest Nights (<i>high temperatures</i>).....	43
Extreme Temperature Swings: Same Day Temperature Climb	44
Extreme Temperature Swings: Change of Day to Day MAX Temperature.....	44
Highest and Lowest Temperature of Month/Year	45
<i>Graph: Monthly Extreme Temperature Difference</i>	48
First/Last 70°, 80°, 90° and 100° of the Year	49
Heating Degree Days: Monthly and Seasonal	53
Cooling Degree Days: Monthly and Seasonal	56
Last Freeze of Spring/First Freeze of Fall and Freeze-free Period	59
Julian Day Converter	61

Section III. Precipitation Records and Data

Annual Precipitation, Normals and Extremes, graphic	63
<i>Graph: Annual Total Precipitation (1850-2019)</i>	63
<i>Graph: Daily Extreme Precipitation (1893-2019)</i>	63
Daily Precipitation Records and Normals, by MONTH.....	64
Monthly and Annual Precipitation Totals	70
<i>Progression of 30-year climate normals for monthly Precipitation.....</i>	73
Water Year Precipitation Totals.....	74
Top 5 Wettest and Driest Months	75
Top 5 Wettest and Driest Seasons and Years	76
Short-term Precipitation Record, and 24-hour Rain Records	77
Top Ten Wettest Days of each Month and All-Time	78

Section III. Precipitation Records and Data (<i>continued</i>)	
Days per month of Rainfall of 0.01", 0.10", 0.50" and 1.00"	79
Consecutive Rainy Days of 0.01", 0.25", 0.50" per month	
Rain Streaks w/days of 0.01", 0.10", 0.25", 0.50", 1" and 2"	80
Dry Days and Dry Spells (<i>Zero Rain, and Trace or Less</i>)	81
Monthly Days with Rain (<i>0.01 inch or more</i>), Trace of Rain, and No Rain	82
Annual Days with Rain (<i>0.01 inch or more</i>), Trace of Rain, and No Rain	84
Daily Frequency of Precipitation (<i>occurrences and probability</i>)	85
Monthly and Seasonal Snowfall Totals	86
<i>Progression of 30-year climate normals for monthly Snowfall</i>	87
Snowfall Records	88
First and Last Snowfall of the Winter	88
Christmas Snow	88
Section IV. Pressure, Wind and Weather Data	
Highest and Lowest Pressure, and Strongest Wind	89
Monthly Normal and Extreme Pressure.....	90
Monthly Normal and Strongest Sustained and Gusts.....	91
Top 5 Windiest Months and Years.....	91
Wind Direction: Frequency based on time of day and month.....	92
Wind Speed: Frequency based on time of day and month.....	92
Wind Direction: Frequency based on type of Weather and month	94
Days per Month with Dense Fog and Extended Periods of Fog.....	96
Relative Humidity Normals each Month, by hour	97
Weather Frequency by Month (rain, fog, thunderstorms, snow)	98
Average, Least and Most Clear, Partly Cloudy and Cloudy Days.....	99
Cloud Cover Frequency by Month (Clear, Scattered, Broken and Overcast).....	100
Holiday Weather and Extremes	101
Condensed Daily Normals for Temperature and Precipitation	108
Condensed Monthly Extremes and Climatic 30-Year Normals	109

Climate of Astoria

I. Revision Notes.

This is the fourth revision of the Climate of Astoria, which was originally issued in 1996.

This revision updates data through Jan 2024.

II. Geographical Overview.

Astoria's perennially verdant landscape is hemmed by rather low mountains to the north, east and south. To the west, it is open to the Pacific Ocean, with over four miles of low green dune lands between the river and the Astoria airport, as well as the last 10 miles of the Columbia River.

North of the Astoria airport, 8 to 12 miles distant, the Washington 'hills' rise to 1000 - 1200 feet. Often, fog and stratus will bank against these hills during, and even before a storm. East to northeast for 2 to 4 miles, the Astoria hills rise to about 600 feet. To the east to southeast, for 4 to 14 miles, consecutively rise the ridges of the Coast Range. The highest point near Astoria is the prominent landmark of Saddle Mountain, rising to 3283 feet above sea level. After the passage of a strong winter cold front, fresh snow on the mountain will mark the freezing level. An arm of the Coast Range extends from east of Astoria and to the south, and ends 15 miles to the southwest at Tillamook Head, just south of the town of Seaside.

From Seaside northward to the south bank of the Columbia River are 18 miles of sandy beaches. Behind these beaches lies a 2 to 3 mile wide stretch of dunal lands, exposed to the ocean winds. Homes and farms shelter in the depression, which parallels the crests of the undulating terrain. Here also are shallow fishing and swimming lakes, and cranberry bogs, disposed to fog and frost. Similar areas

continue north of the Columbia River in Washington.

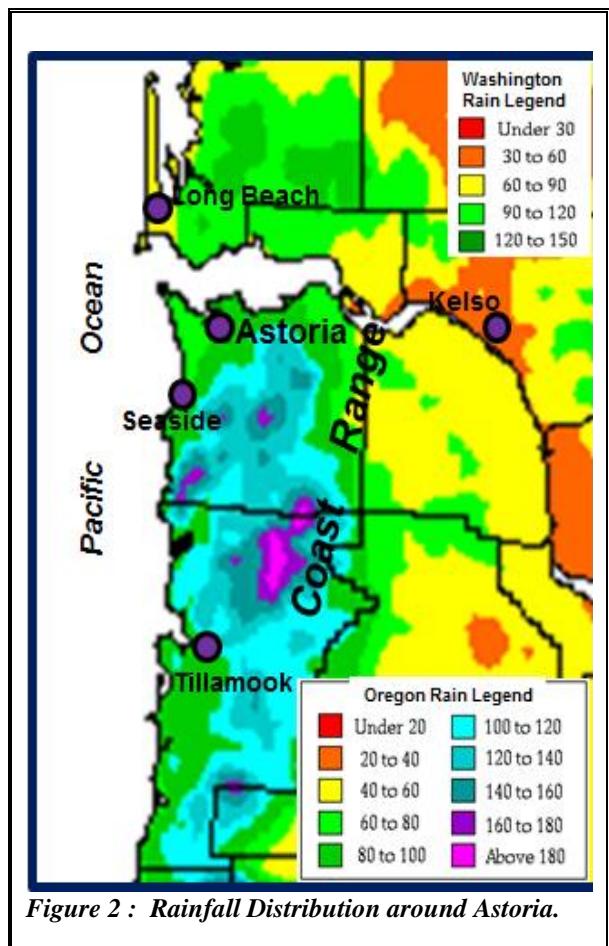

Because of the damp climate, it is necessary to convert to ensilage much of the hay grown on the dairy and other farms that dot the lower lands, particularly along Youngs River and the Lewis and Clark River. Forest cover much of the surrounding hills and uplands.

The airport sits by the south bank of the Columbia estuary, and west of Youngs Bay on their flood plain or tidal flats. Low dikes shut out their waters, and partially rim the field. This increases the bog-like characteristics in collecting chilly air, with fog and/or frost. When air temperatures drop below water temperatures, fog forms easily, or will roll in from the Pacific Ocean, Columbia River, and/or Youngs Bay. This fog will often roll into the airport area late in the afternoon to the evening hours, and persist well into the following day. However, midday cloud ceilings and visibilities are generally above flight minimums. During the summer months, a sea breeze commonly blows inland up the Columbia River by early afternoon, thus stopping the diurnal rise in temperature. In winter, cold air may funnel down the Columbia River from further inland. This area is also a favorite flying destination for general recreational pilots.

III. Climatological Summary.

Weather hazards occasionally occur. For flying concerns, the greatest are fog and low clouds that often obscure surrounding terrain, and gales. Even with moderate surface wind speeds, wind and turbulence at 800 feet may be severe enough to upset a heavy plane. Storms over the Pacific may sink or wreck ships. Even in fair weather, winds and wave may combine to produce a type of breaker known as the ‘widow-maker’ and swamp a boat quickly. Heavy winter rains can inundate the lowlands and cause landslides. High tides enhanced by storm surge from gales can push seawater across highways or up higher onto beaches. Powerful winter storms bring strong winds, which can topple power lines and trees. Showers of small hail may briefly whiten the ground in nearly any month.

Rain is a part of life during autumn and winter. Nearly 90 percent of the annual rainfall occurs between early October and mid-May. In fact, only about 2 percent of our rain occurs in July and August. It is not uncommon to see relatively dry, with little rain in both July and August. The first autumn rain often arrives about early September, but it generally is not until early October for the rain to increase in frequency. Terrain differences can bring significant changes in rainfall. Along the coast, rainfall is generally 65 to 90 inches. But just inland, the Coast Range receives over 120 inches of rain per year (*figure 2*).

Precipitation falls mostly as rain, with an average of fourteen days per year recording measurable snow. Snow accumulations are rarely more than one inch, and often melt within a day. On average, Astoria receives 1.4 inches of snow annually. Most likely areas of snow will be the higher terrain above 800 feet. Too many times, warm air pushing in from the Pacific quickly ends the threat of low elevation snow. However, occasionally, significant snow can occur, such as in late January of 1969 with nearly 2 feet of snow.

The winter season is characterized by mild temperatures, frequent cloudy skies, and rain. Winds are predominately either southerly during the mild rainy spells, or northerly during the colder dry spells. Outbreaks of cold arctic air from east of the Cascades will occasionally spill into Western Oregon via the Columbia River Gorge, bringing chilly east winds. During these cold air events, if a moist Pacific front pushes into the region, rain will occur. Initially, the warm south winds may not be strong enough to scour out the cold air from the lowlands. As a result, the rain falls into the shallow layer of sub-freezing air, with freezing rain, sleet, and sometimes snow resulting. Often this phase is of short duration, with temperatures warming

and ending the threat of freezing/frozen precipitation.

Temperatures are generally mild during the cool season, with highs in the middle 40s to lower 50s and lows in the 30s. It is common to see overnight winter low temperatures into 20s. During cold nights in winter, with an arctic air mass in place over the region, winds are often light under clear skies. This allows for rapid temperatures falls once the sun sets. At that time, temperatures can plummet below 20°F. Such cold temperatures are rare, averaging about twice per winter. The most notable cold snaps occurred in 1990 and 1972. During the 1990 and 1972 cold snap, Astoria recorded its lowest temperature at 6°F above zero.

Spring is a transitional time as the weather pattern shift from winter to summer. However, spring is not all that warm, and often, not all that dry. March and April are often damp and cool, with only a few warm dry days. May and June turn more dry, and see the most of the warming weather. Generally, afternoon temperatures are rather stable, with highs in the upper 50s to middle 60s. However, it is not uncommon to see temperatures into the 80s during late April through June. This will occur when winds blow from the land out to sea (offshore flow). The warmest day in May was 93°F, occurring in 2008. Even though the number of rainy days decreases in May and June, there are still plenty of cloudy days.

Summer finally arrives in early July, when afternoon highs in the upper 60s to lower 70s occur with regularity. High pressure over the Pacific builds in the summer, with north to northwest winds prevailing in the afternoons and evenings. This high also shuts off the moisture source, allowing summers to often be dry and warm. Temperatures will often reach the lower to middle 70s, but these warm

days do not last long before the cooler ocean air moves inland and cools the region back into the 60s. Temperatures above 100 degrees are quite rare, only occurring twice since 1890. Hottest temperature recorded Astoria was 101°F, occurring on 1st of July 1942 and 27th of June 2021.

Autumn is the reverse of spring. September is still warm and dry, but by early to mid-October, the wet autumn weather arrives with high temperatures in the 50s. As the night time hours increase, the valley cools more, allowing fog to form on clear nights. Fog can be quite dense during the late night and early morning hours, and can persist for several days.

Destructive windstorms are common in Astoria, as strong fronts and low pressure systems arrive from the Pacific. Astoria is often spared the strongest winds, due to proximity of the hills to south and southeast. These hills act as a block for the strong southerly winds. However, strong south winds will blow across the lowlands between the Pacific and Astoria. Surface winds often exceed gale force (50 mph or greater) and have commonly exceed 70 mph. Such strong winds predominately occur between October and March. The strongest winds occurred during the infamous Columbus Day storm of 1962, when south winds peaked at 104 mph.

Thunderstorms can occur during any month, but are not common. Thunderstorms in the winter and spring are weak, producing small hail and brief gusty winds. However, those in summer can produce prolific lightning, strong winds and larger hail. Occasionally, thunderstorms will produce funnel clouds, but tornadoes are rare. A few times per year, some funnels to touch the ocean surface, resulting in a waterspout.

On average, the last occurrence of minimum temperatures of 32°F or colder in the spring is 25 March, while the first of autumn occurs near 15 November. However, minimum temperatures of 32°F have occurred as late in spring as 12 May (in 1985) and as early in autumn as 7 October (in 1983).

IV. Station Observing History.

Astoria's weather records date back to October 1850, with some breaks. In November 1883, the Weather Bureau established a station at Astoria, and the records have been nearly continuous since. In 1948, an experimental agriculture station, Astor Experimental Station, was created. This station, located about 3 miles to south of Astoria, just off the Nehalem Highway, near where the Wallooskee River empties into Youngs River. This station continued until 1973. This site provided supplemental data for our records when data from Astoria was incomplete.

Between 1883 and 1953, the Astoria station moved about several locations in downtown Astoria (*figure 3*). In 1953, the United States Weather Bureau (USWB) established a new first-order weather station at the Clatsop County Airport, located to the southwest of downtown Astoria on the west side of Youngs Bay. Staff now observed and recorded weather observations 24 hours per day. The primary reason for the new weather station was due to the increased air traffic along the coast. Many of the aircraft needed to land and refuel between the two cities. Astoria, like North Bend and Newport, became stopping points for aircraft. The new weather stations supplied weather information to pilots, making these pilot weather briefings a significant operation and the new offices. Old weather equipment was replaced, and other equipment such as wind anemometers and barometers were added. In

Fig 3: Observation sites around Astoria.

addition to the pilot weather briefings and weather data collection, the new Astoria weather office issued regular public and coastal marine weather forecasts and if necessary, local storm warnings.

On 1 March 1993, the Automated Surface Observing Station (ASOS) became fully operational. The National Weather Service (NWS) continued operations at Astoria through December 1995. Afterwards, weather forecasts, services and warning operations were transferred to the NWS office in Portland.

Climate data continue to be collected, but snowfall was no longer measured due to ASOS inability to measure snowfall and snow depth. Supplemental snow data for Astoria (1993-2005) was been provided via the data collected at the Fort Clatsop National Monument, located 1.6 miles southwest of the airport.

V. Updating this Study.

For future updates to the data in this study, refer to the latest climatic data published by the National Climatic for Environmental Information, or contact the National Weather Service in Portland.

Astoria climate and past weather data is also available on our website:

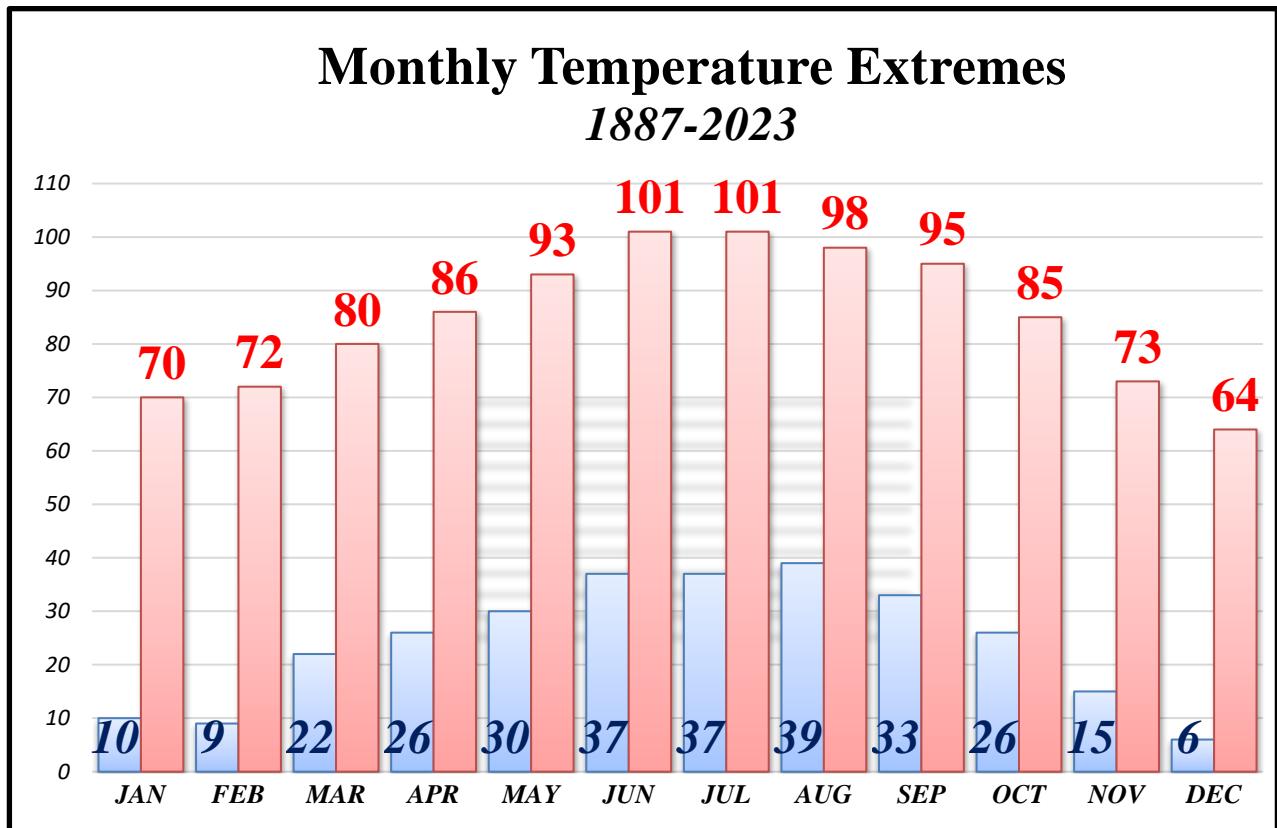

<http://weather.gov/Portland>

Following gives details on the movement of Astoria's weather equipment.

1991-2020	49.4	50.9	53.0	55.9	60.5	64.0	67.4	68.7	67.6	60.7	53.6	48.7	58.4
2001-2030													

¹Normals 1971-2000 recalculated using same methodology as that of the 1981-2010. There may or may not be much difference from the original 1971-2000 normals data set, but this process does yield more realistic normal for that period. Same process is used for subsequent normals (1981-2010 and 1991-2020).

1991-2020	38.1	37.4	39.0	41.5	46.3	50.6	53.9	53.9	50.5	44.9	40.2	37.6	44.5
2001-2030													

¹Normals 1971-2000 recalculated using same methodology as that of the 1981-2010. There may or may not be much difference from the original 1971-2000 normals data set, but this process does yield more realistic normal for that period. Same process is used for subsequent normals (1981-2010 and 1991-2020).

1991-2020	43.7	44.2	46.0	48.7	53.4	57.3	60.6	61.3	59.0	52.8	46.9	43.2	51.4
2001-2030													

¹Normals 1971-2000 recalculated using same methodology as that of the 1981-2010. There may or may not be much difference from the original 1971-2000 normals data set, but this process does yield more realistic normal for that period. Same process is used for subsequent normals (1981-2010 and 1991-2020).

Top 5 Largest Temperature Range of the Extremes for Calendar Year

1. **89°** in 1972 from 6° to 95°
2. **83°** in 1990 from 23° to 86°
3. **83°** in 1978 from 11° to 94°
4. **83°** in 1942 from 18° to 101°
5. **81°** in 1980 from 11° to 92°

ASTORIA's FIRST/LAST of Year for MAXIMUM Temperature of...format: date of occurrence (*month.day*), followed by that day's maximum temperature

	at least 70 deg.		at least 80 deg.		at least 90 deg.		at least 100 deg.	
	First	Last	First	Last	First	Last	First	Last

Astoria	FIRST Occurrence of Spring/Summer		
	Average	Earliest	Latest
Temp \geq 70° F	21 Apr	30 Jan 1940	20 Jun 1896
Temp \geq 80° F	13 Jun	14 Mar 1926	17 Sept 1962
Temp \geq 90° F	13 Jul	15 May 2006	13 Sept 1957
Temp \geq 100° F	----	27 Jun 2021	11 Jul 1961

Since 1887:

- 1921, 1954 and 1998 are the only years in which temperatures failed to reach 80°F.
- Temperatures $\geq 100^{\circ}\text{F}$ have only occurred only 3 times: in 1942, 1961 and 2021.

Astoria	LAST Occurrence of Summer/Autumn		
	Average	Earliest	Latest
Temp \geq 100° F	-	27 Jun 2021	11 Jul 1961
Temp \geq 90° F	25 Jul	15 May 2006	22 Sept 2009
Temp \geq 80° F	12 Sep	22 May 2001	15 Oct 2022
Temp \geq 70° F	13 Oct	9 Sept 1892	11 Nov 1999

HEATING DEGREE DAYS: Heating Degree Day (HDD) units are used by utility companies and other institutions for determining energy consumption. The heating season is July 1st through June 30th.

How are Heating Degree Days calculated? Calculate day's mean temperature (*maximum and minimum added, then divide by 2*), then subtract from 65 (*baseline*). All negative values are recorded as a zero.

Example: Max Temp: 57 Mean Temp = $(57 + 35) \div 2 = 46$
 Min Temp: 35 HDD for the day = $65 - 46 = 19$ units

COOLING DEGREE DAYS Cooling Degree Day (CDD) units are used by utility companies and institutions for determining energy consumption. The cooling season is January 1st to December 31st.

How are Cooling Degree Days calculated? Calculate day's mean temperature (*maximum and minimum added, then divide by 2*), then subtract from 65 (*baseline*). All negative values are recorded as a zero.

Example: Max Temp: 94 Mean Temp = $(94 + 63) \div 2 = 78.5$
 Min Temp: 63 CDD for the day = $78.5 - 65 = \boxed{14}$ (rounded)

Averages & Extremes ¹	$\leq 24^{\circ}$ F	$\leq 28^{\circ}$ F	$\leq 32^{\circ}$ F	$\leq 36^{\circ}$ F
<i>Average Last Occurrence in Spring</i>	2 Feb	14 Feb	29 Mar	26 Apr
Latest Occurrence in Spring	12 Mar 1990	18 Apr 1927	12 May 1985	31 May 1953
<i>Average First Occurrence in Autumn</i>	2 Dec	28 Nov	9 Nov	20 Oct
Earliest Occurrence in Autumn	2 Nov 1935	28 Oct 1971	7 Oct 1983	13 Sept 1970
<i>Average Freeze-Free Period</i>	213 days			
Shortest Freeze-Free Period	149 days (1985)			
Longest Freeze-Free Period	346 days (1934)			

¹Averages are based on 1991-2020 data. Extreme data are 1890 to present.

Julian Day Converter

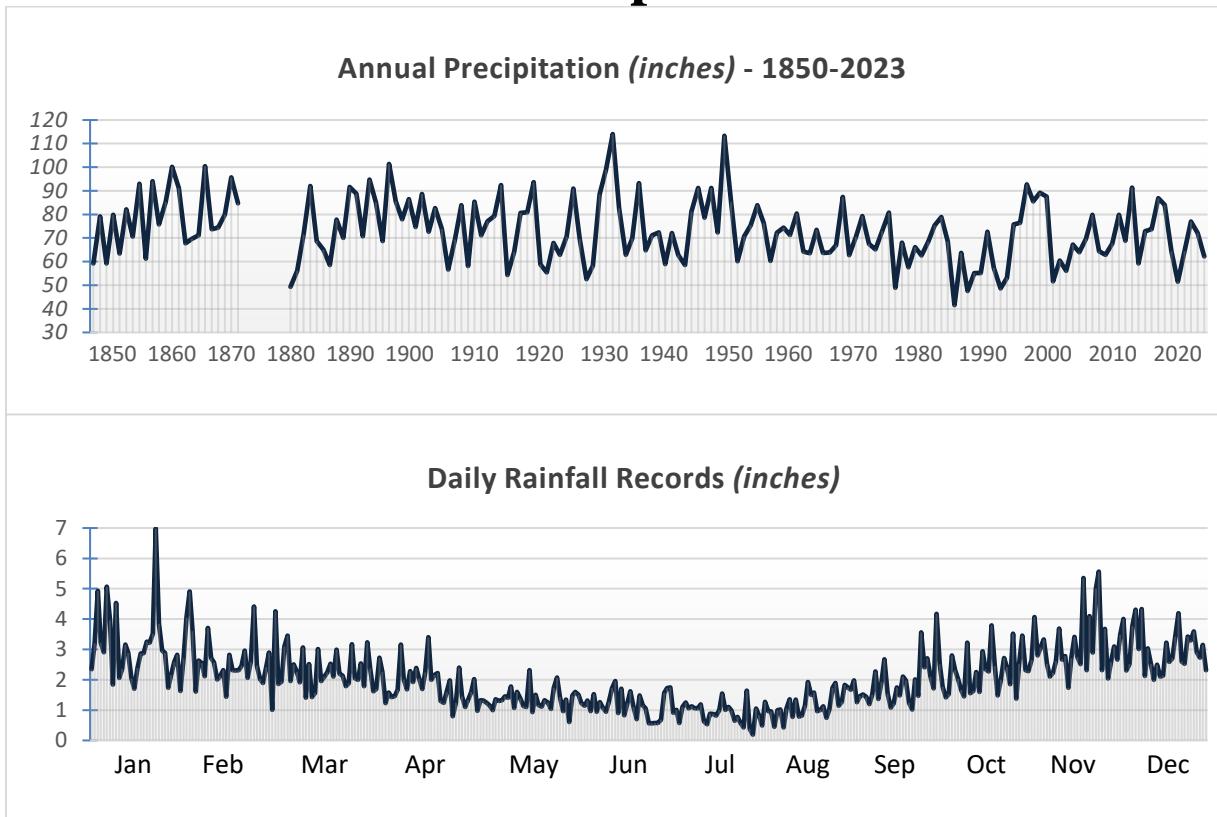

If the year is a leap year, then assign 29 February as Julian day 60.
 For the remainder of that year, add 1 for any particular day.

Leap Years for the 20 th and 21 st Centuries

Mo/Yr	1950	1952	1951	1975	-	-	-	-	-	1994 ²	1985	1964	1969

¹ Normals are 30-year NCDC Climatic Normals (1991-2020). Extremes 1850 through 2023. Units are inches.

² Most snow in October: Trace of snow in both 1971 and 1935.

³The snow averages are based on weather observations 1953 to 1995, period of full snow observations. These values will be different from the 1991-2020 normals (listed on line labeled 'normal snow', which contained years during which snow was not measured by the ASOS).

¹ Normals listed are climatic normal (1991-2020). For snow, averages use 1953-1995 data (period of full snow observations).

Daily and cumulative averages based on a daily value that is computed by normalizing monthly total across the days of a month.

² Last year of multiple occurrences listed. Period of Record for daily data: rain 1887-2023, snow 1887-1995.

¹ Normals listed are climatic normal (1991-2020). For snow, averages use 1953-1995 data (period of full snow observations).

Daily and cumulative averages based on a daily value that is computed by normalizing monthly total across the days of a month.

² Last year of multiple occurrences listed. Period of Record for daily data: rain 1887-2023, snow 1887-1995.

¹ Normals listed are climatic normal (1991-2020). For snow, averages use 1953-1995 data (period of full snow observations).

Daily and cumulative averages based on a daily value that is computed by normalizing monthly total across the days of a month.

² Last year of multiple occurrences listed. Period of Record for daily data: rain 1887-2023, snow 1887-1995.

All Time		45	1985				All Time	42	1936		13 July-23 August

Streaks with Rainfall of a Trace or Less

- 52 days 1909 27 Aug – 17 Oct
- 45 days 1985 15 Jun – 29 Jul
- 42 days 1936 13 Jul – 23 Aug
- 38 days 1896 13 Jun – 20 Jul
- 36 days 1955 8 Aug – 12 Sep
- 35 days 1997 16 Jul – 19 Aug

Streaks with No Rainfall (*Not a drop!*)

- 42 days 1936 13 Jul – 23 Aug
- 33 days 1896 18 Jun – 20 Jul
- 29 days 1997 22 Jul – 19 Aug
- 28 days 1917 7 Aug – 3 Sep

¹Nor are 1991-2020 Normals. AVG are 1887-2023 averages. Year average is based on annual sums, not the sum of months. ⁺Last of several occurrences.

Days per Month with No Rain (N), Trace Only (T) or Measurable Rain (R)

	w/Rain	196	Most Days	229	in 1893	Most Days	233	in 1907

Daily Frequency of Measurable Precipitation (*Rainfall ≥ 0.01 inch*)
 based on 131 years of data, 1892 to 2023

Daily Frequency (%) with rainfall ≥ 0.01 "

How To Use Chart: For all 22 Jan, rain fell on 92 of them, or 70% of all 22 Jan.

31	88	68			90	69		49	37		23	17

#is the number of times measurable (0.01" or more) rain fell on that day.

% is percentage of that date's rainy days compared to all days of that particular date.

¹ In March 1993, ASOS (Automated Surface Observation System) replaced the human observations. ASOS does not have the ability to measure snowfall. As a result, snowfall was not available 1993 to the present. To compensate, snowfall at the airport was augmented/derived using data from the nearby Fort Clatsop National Monument.

³Due to lack of observations, the snow that fell in 2008 may or may not have been on the ground for Christmas.

Pressure and Wind Data

picture (above): Trees damaged by wind on 14 December 2007, at Gearhart.

For the Astoria Airport (1953-2023)

Strongest Sustained Wind

South at 55 mph 3 December 2007

3 December 2007

15 January 1971

Strongest Wind Gust

South at 106 mph 3 December 2007

2nd Strongest South at 96 mph 12 October 1962

For the Astoria Area (1889-2023)

Highest Pressure **30.80 inches** on 30 December 2014

Lowest Pressure **28.45 inches** on 9 January 18880
 2nd lowest *28.53 inches* *on 12 December 1995*

Normal and Extreme Sea Level Pressure

All Time	30.80"	30 Dec 2014	28.53" 28.45"	12 Dec 1995⁵ 9 Jan 1880⁵

¹Averages are derived from 1991-2020 data.

²Pressure readings are in units of inches.

³Pressure recorded in the month, but data records not available to determine exact date.

⁴Has occurred more than once, with most recent date of occurrence listed.

⁵Lowest pressure at the airport was set in 1995. But, looking back far into Astoria's historical record, an intense storm in January 1880 brought a record low pressure of 28.45 inches.

¹Data based on hourly observations between 1948 and 1995.

Frequency of Astoria's Wind DIRECTION¹, based on Weather Conditions

Using this chart: Each direction totals ~100%. Within that direction are the frequencies (%) of weather (- indicates less than 1%).

Example: In January, when wind is from the south (S), it rains 28% of the time, but has no weather occurring 62% of time.

¹VRB is variable (less than 3 mph). A - is near zero. Based on 1948-1995 observational data.

Numbers total may not equal 100%, as not all weather was included (such as blowing snow, hail, dust, smoke and haze).

Fog Data at Astoria
1953 through 2021

Days per Month and Consecutive Days with Dense Fog
(Dense Fog defined as that which reduces horizontal visibility to 1/4 of mile or less)

Annual	40	61	2011	26	2006	8	1974 (12-19 Oct)

¹Normal is from 1981-2010 data

²Annual total may not equal sum of months due to rounding of monthly values.

³Last year of multiple occurrences listed.

Most Consecutive Days⁴ with Dense Fog

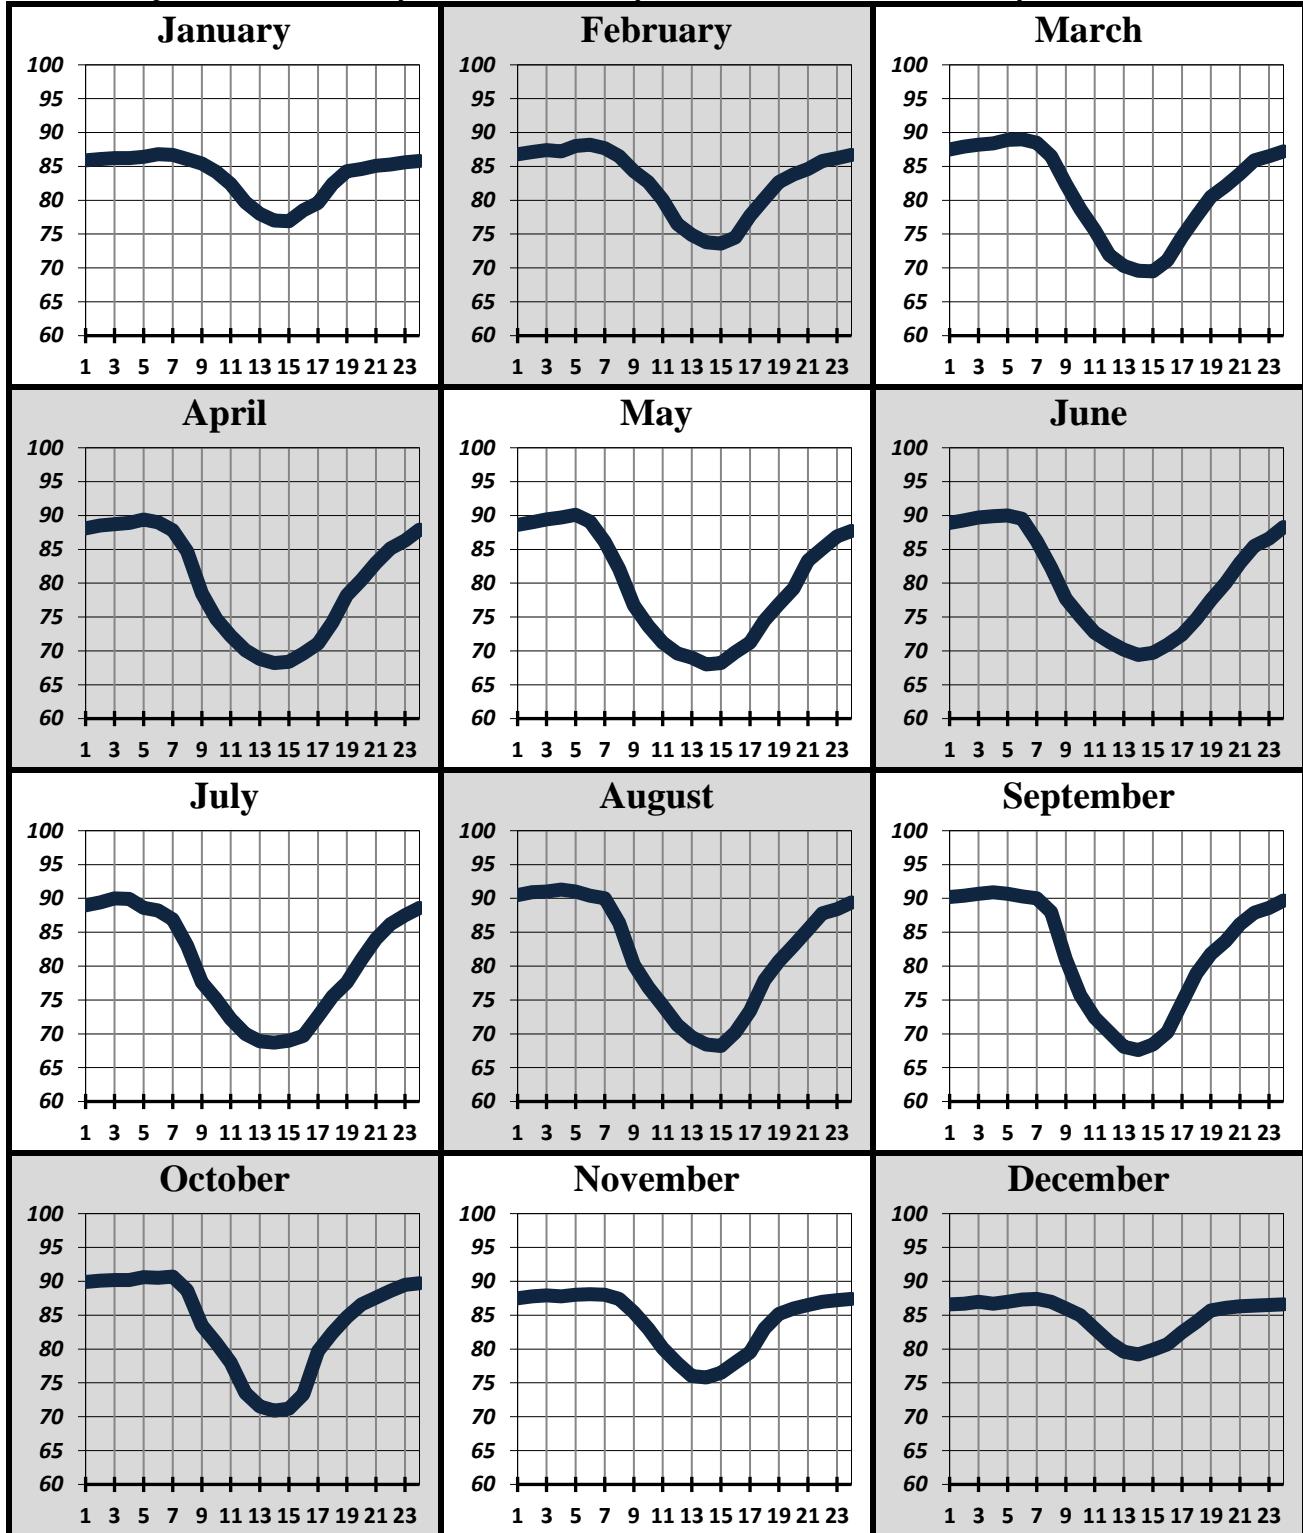

8 days	1974	12 th – 19 th October
7 days	1962	17 th – 23 rd December
6 days	2013	14 th – 19 th December
6 days	1988	5 th – 10 th October
6 days	1980	19 th – 24 th November
5 days	2015	28 th January – 1 February
5 days	2011	6 th – 10 th September
5 days	1995	3 rd – 7 th February
5 days	1993	28 th September – 2 nd October
5 days	1978	19 th – 23 rd February
5 days	1959	3 rd – 7 th December
5 days	1956	5 th – 9 th February

3-4 days common occurrence during late summer through winter

⁴Fog only needs to occur on the day, and may not necessarily last the entire day.

ASTORIA: Normal Hourly Humidity (%) Curves, by Month¹

Example: normal humidity at 10 am in January is 85%, while same time in July it is 70-75%.

¹Time is local standard time.

Observed Weather Type Frequency¹

Astoria's hourly observations (1948-1995, pre-ASOS data) were categorized into groups of time. For example, at 10 am in January, snow was observed 2.3% of the time, with rain 32% of the time, and fog 21% of the time. Overall, at 10 am in January, there was an obstruction to visibility 21% of the time.

FG	Fog	RA	Rain and/or Drizzle
SN	Snow and/or Sleet	TS	Thunderstorms
VO	Any obstruction to visibility, including rain, fog, snow, smoke, and blowing snow

¹Multiple occurrences with the same number, with the year of most recent occurrence listed.

²Averages are rounded to nearest whole number.

³Annual Averages is calculated using the entire year of data, and is not the same as adding the totals from each month.

Astoria's Cloud Cover Frequency

Astoria's hourly observations (1948-1995 data) were categorized into groups of coverage and time. Cloud cover coverage is either clear, scattered or broken clouds, or overcast. For example, at 10 am in January, 5.2% of the time it was clear, but 72.9% of the time, skies were overcast.

CLR	clear skies	<i>clear</i>	less than 10% of sky is covered by clouds
SCT	scattered clouds	<i>partly cloudy</i>	10% to 60% of sky is covered by clouds
BKN	broken clouds	<i>mostly cloudy</i>	60% to 90% of sky is covered by clouds
OVC	overcast	<i>cloudy</i>	more than 90% of sky is covered by clouds
