¹ Normals are 30-year NCDC Climatic Normals (1991-2020). Extremes 1850 through 2023. Units are inches.

² Most snow in October: Trace of snow in both 1971 and 1935.

³The snow averages are based on weather observations 1953 to 1995, period of full snow observations. These values will be different from the 1991-2020 normals (listed on line labeled 'normal snow', which contained years during which snow was not measured by the ASOS).
