February 2023 and Winter 2022-23 Climate Summary

For the third winter in a row the ENSO (El Niño Southern Oscillation) was in a La Niña phase which usually means that we'll see overall temperatures slightly above normal for the season while rainfall will be below normal. This overall pattern was accurate for West Central and Southwest Florida. We saw some large swings in the temperatures during the winter with the coldest days on December 24th and December 25th where temperatures were 20 to 30 degrees below normal. February ended up about 4 to 6 degrees above normal while winter (Dec/Jan/Feb) was 1 to nearly 4 degrees above normal

The various ups and downs in the temperatures this past winter can be seen in the observed daily maximum and minimum temperatures for Tampa in the graphic below. The orange areas are the days with well above normal temperatures while the blue are days with well below normal temperatures.

Below are temperature tables for February and the Winter (Dec/Jan/Feb) at sites available at this time.
