## Preliminary February 2025 and Winter 2024-25 Climate Summary

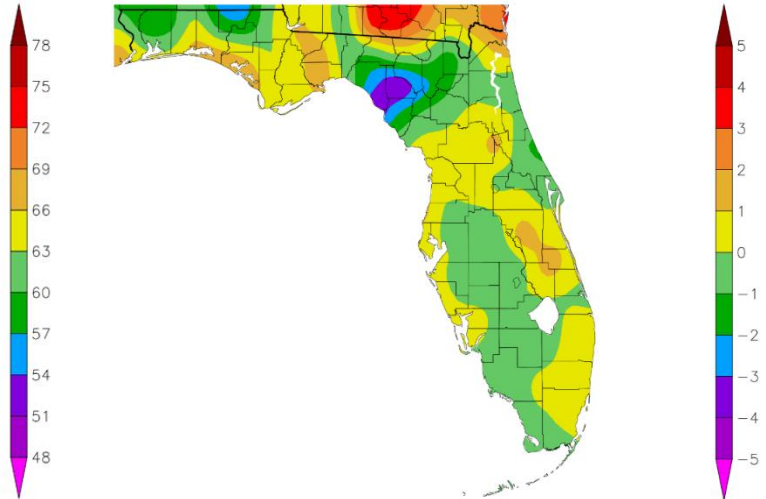

The ENSO (El Niño Southern Oscillation) switched to a weak La Niña this winter which usually means we'll see overall temperatures slightly above normal for the season while rainfall will be below normal. This overall pattern has been accurate as far as precipitation, but as for temperatures we've seen some large swings during the winter with some rather chilly days where temperatures were 10 to 15 degrees below normal while others were 10 to 15 degrees above normal. This February so far temperatures are averaging about 3 to 6 degrees above normal, with several sites on track to end up in the Top 10 Warmest. Meanwhile for the winter so far (Dec 1 to Feb 25) we are running about 1.5 degrees below normal to about 1.5 degrees above normal.

Below are graphics that depict the monthly average temperature and departure from normal temperature (based on the 1991-2020 Normals) across the area.

Temperature (F)  
12/1/2024 - 12/31/2024

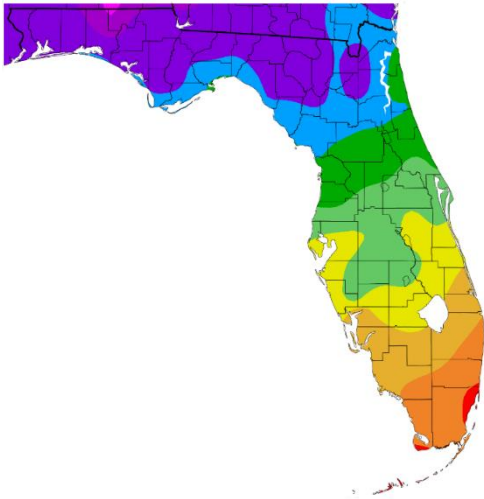

Departure from Normal Temperature (F)  
12/1/2024 - 12/31/2024

1/1/2025 - 1/31/2025

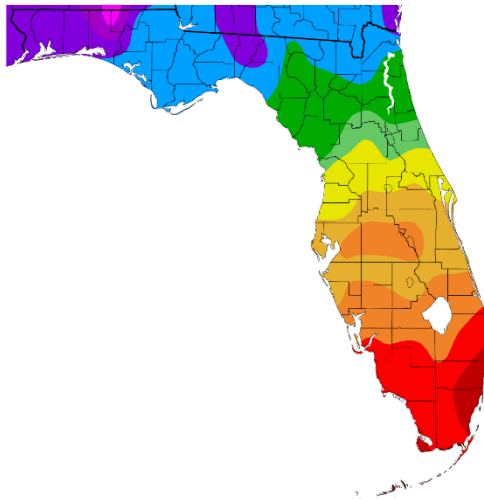

Departure from Normal Temperature (F)  
1/1/2025 - 1/31/2025

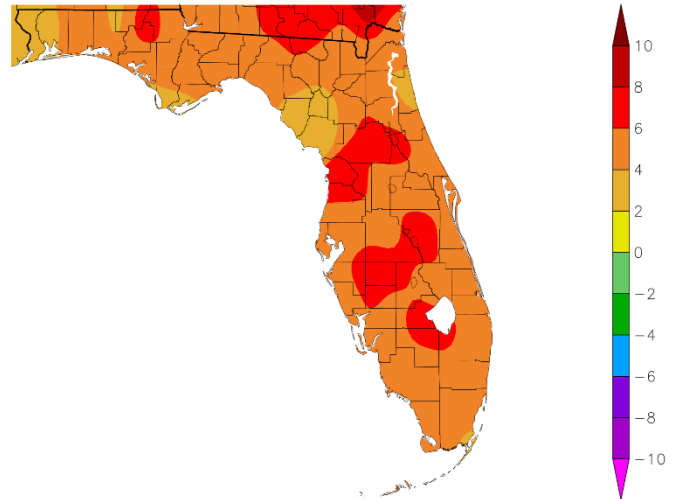

**January 2025**

Temperature (F)  
2/1/2025 - 2/24/2025

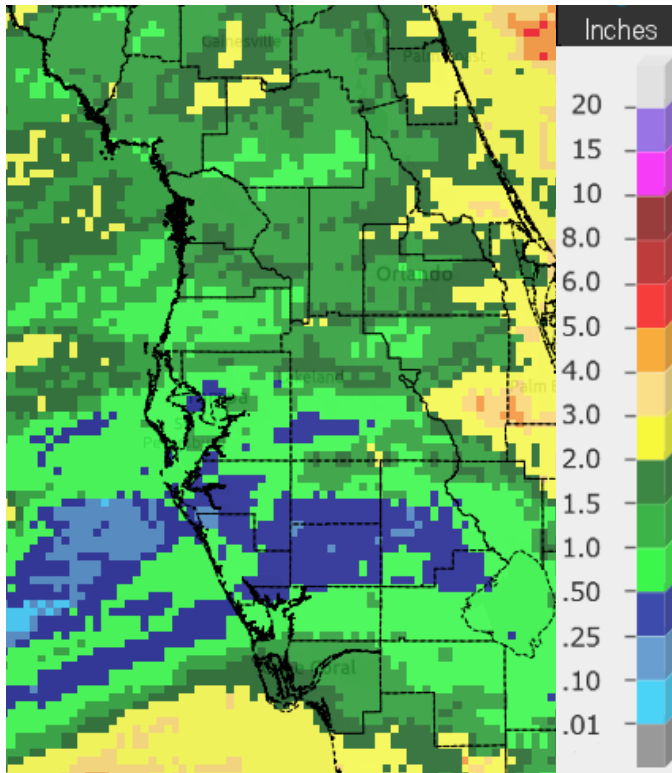

Departure from Normal Temperature (F)  
2/1/2025 - 2/24/2025

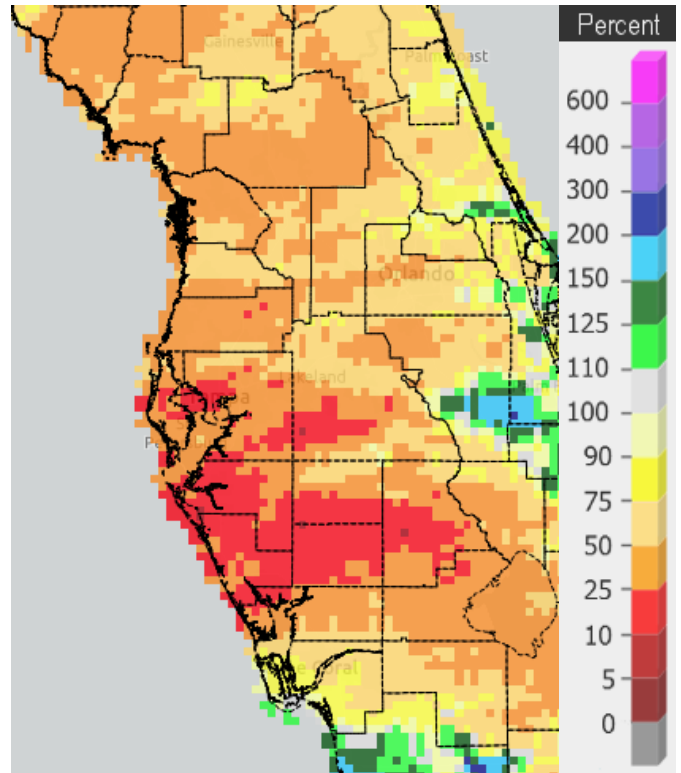

**February 1-24, 2025**

Graphics Source: High Plains Regional Climate Center (HPRCC)

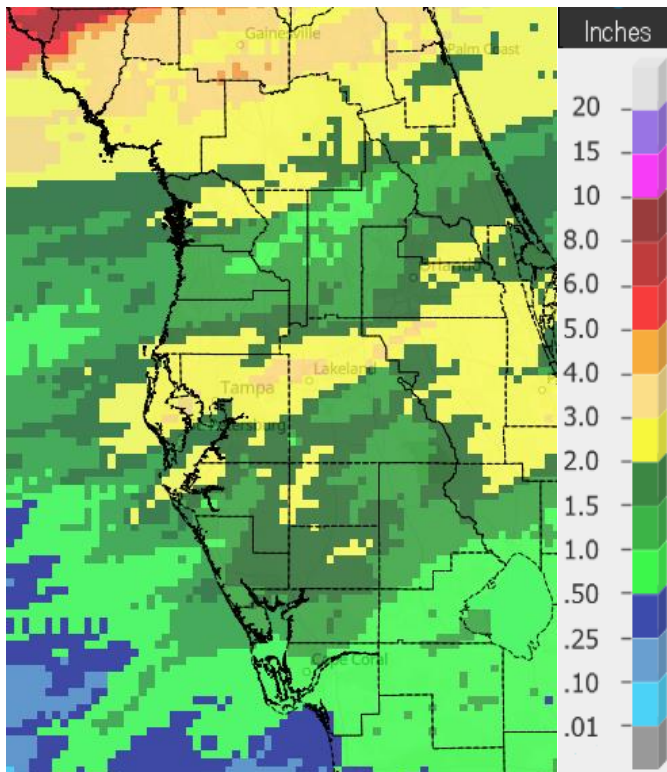

As for rainfall this February, areas across the central peninsula have seen near to above normal rainfall, while much of the Nature Coast is well below normal. Meanwhile, for the Winter 2024-2025 so far, we've pretty much seen below normal rainfall across the region, except a small area near Interstate 4.
