As for rainfall, our rainy season has gotten underway with the highpressure ridge axis varying from north of the region to south which has spread the rain out across the Florida peninsula. However, during the second week of the month, deep tropical moisture overspread much of the area leading to widespread heavy rainfall, especially across southwest Florida where 3-day rainfall totals exceeded 10 inches. Overall, so far this month many areas from around the Interstate 4 corridor northward are running below normal, with well above normal rainfall across southwest Florida.
