01	0000CST								
30	2359CST				0	0			Drought

Despite several widespread rain events during the month of April, long-term drought conditions remained in the severe (D2) category across northwestern and west central Arkansas through the month. Some of the heavier rainfall amounts for the month included 8.58 inches at Berryville AR and 7.29 inches at Eureka Springs AR. Normal precipitation for the month of April is around 4.30 inches in northwestern Arkansas. Reservoir levels improved as a result of the month's rainfall.

OKLAHOMA, Eastern

OKZ049-053>076 **Pushmataha - Choctaw - Osage - Washington - Nowata - Craig - Ottawa - Pawnee - Tulsa - Rogers - Mayes - Delaware - Creek - Okfuskee - Okmulgee - Wagoner - Cherokee - Adair - Muskogee - Mcintosh - Sequoyah - Pittsburg - Haskell - Latimer - Le Flore**

01 0000CST **0** **0** **Drought**
30 2359CST

Extreme (D3) drought conditions across northeastern Oklahoma at the beginning of April had improved into the severe (D2) category by the end of the month as a result of several widespread rain events that occurred during the month. Severe (D2) drought conditions continued across the remainder of eastern Oklahoma throughout the month of April despite the beneficial rainfall that occurred during the month. Some of the heavier rainfall amounts for the month included 8.63 inches at Nowata OK, 7.96 inches at Muskogee OK, 7.82 inches at Bartlesville OK, 7.62 inches at Burbank OK, 7.55 inches at Wynona OK, 7.39 inches at Hominy OK, 7.38 inches at Pawhuska OK, and 7.16 inches at Jay OK. Normal precipitation for the month of April ranges from around 3.10 inches in Pawnee County to 4.70 inches in Latimer County.

Despite the much needed rainfall that occurred in April across eastern Oklahoma, major rainfall deficits continued over the long-term. Since November, the northeastern Oklahoma district had received only 62 percent of its normal average rainfall while the east central district had received 52 percent and the southeastern district had received 68 percent.

The rainfall that occurred in April resulted in most of the major reservoirs in eastern Oklahoma to be fully replenished by the end of the month. The only major reservoirs that remained near 75 percent of their normal pools were Eufaula, Tenkiller, and Beaver.
