The river crested at 405.0 feet at 7:45 am CDT on the 10th, resulting in moderate flooding. Tailwater Park was inundated by flooding. Residences were flooded and Rena road was inundated by high water. Monetary damage estimates from the flood were unavailable. The river fell below flood stage at 6:15 pm CDT on the 11th. A slow-moving low pressure system moving into the Plains on the 9th and 10th resulted in multiple periods of thunderstorms across the region. Widespread heavy rainfall occurred as a result of this activity, which caused moderate flooding of Lee Creek near Van Buren. The Kiamichi River near Antlers rose above its flood stage of 25 feet at 1:15 am CDT on May 11th. The river crested at 28.96 feet at 7:00 pm CDT on the 11th, resulting in moderate flooding. Flooding occurred along the west bank of the river near Moyers, which inundated a campground and county roads. The river fell below flood stage at 6:30 pm CDT on the 12th.

A slow-moving low pressure system moving into the Plains on the 9th and 10th resulted in multiple periods of thunderstorms across the region. Widespread heavy rainfall occurred as a result of this activity, which caused moderate flooding of the Kiamichi River near Antlers.

A strong upper level disturbance translate	ed from the Southern Rockies into	the Southern Pla	ins on the 16th V	ery moist and unstable air
was in place across the Southern Plains a				-

A strong upper level disturbance translated from the Southern Rockies into the Southern Plains on the 16th. Very moist and unstable air was in place across the Southern Plains as this system approached. Severe thunderstorms developed over western Oklahoma and northwestern Texas during the afternoon and moved eastward into eastern Oklahoma in the late evening. By the time the storms reached eastern Oklahoma, a well-organized squall line had evolved but due to very strong low level wind shear, multiple tornadoes occurred across the area along with widespread damaging wind. Locally heavy rainfall resulted in flash flooding in some areas through the early morning hours of the 17th.

05/17/15 15:15 CST 0 Flood (due to Heavy Rain)

05/20/15 07:45 CST 0 Source: Official NWS Observations

The Neosho River near Commerce rose above its flood stage of 15 feet at 4:15 pm CDT on May 17th. The river crested at 18.51 feet at 12:30 am CDT on the 19th, resulting in moderate flooding. Agricultural land was flooded as well as low lying areas near Miami, including Riverview Park. The river fell below flood stage at 8:45 am CDT on the 20th.

A strong upper level disturbance moved into the Plains on the 16th. With very moist and unstable air in place ahead of this system across eastern Oklahoma and Kansas, widespread thunderstorms developed as this system approached. The heavy rainfall that resulted from these thunderstorms caused moderate flooding of the Neosho River near Commerce.

Highway 31 west of McAlester was closed due to high water.

A stationary frontal boundary extended across southeastern Oklahoma and west central Arkansas on the 19th. Very moist and unstable air was in place along and south of the boundary. Thunderstorms developed over western Oklahoma during the afternoon and moved eastward across southern Oklahoma during the evening and overnight hours. Widespread heavy rainfall occurred across southeastern Oklahoma, which resulted in flash flooding. Damaging wind was also associated with some of the stronger storms.

This is the first segment of a two segment tornado. This tornado developed between Highways 271 and 144 over heavily wooded and rugged terrain that was inaccessible by road. An aerial survey indicated extensive tree damage in this area, which was also visible from Highway 271 looking southwest from Albion. As the tornado approached Albion from the southwest, trees were uprooted on Deep Lake Loop. Several homes were damaged, an outbuilding was destroyed, and trees were snapped or uprooted in Albion before the tornado moved into Latimer County. Based on this damage, maximum estimated wind in this segment of the tornado was 115 to 125 mph.

Portions of Highway 63 were flooded east of Whitesboro.

A strong upper level disturbance moved into the Southern Plains on the 25th. A moist and unstable air mass was in place across eastern Oklahoma ahead of this system. Thunderstorms that developed over West Texas during the morning hours, intensified during the afternoon and early evening as they moved across southeastern Oklahoma and west central Arkansas. Damaging wind, several tornadoes, large hail up to golfball size, and locally heavy rainfall resulted from these thunderstorms.

An EF-2 tornado severely damaged homes, destroyed numerous barns and outbuildings, and partially collapsed a cell phone tower near Poteau, Oklahoma, on the evening of May 25, 2015. Photo by Ed Calianese, WCM, NWS Tulsa Oklahoma.

MAYES COUNTY --- 1.9 WSW SPAVINAW [36.37, -95.08], 3.7 NE SPAVINAW [36.42, -95.01]

05/29/15 13:27 CST 50K Tornado (EF1, L: 5.40 mi , W: 1500 yd)

05/29/15 13:39 CST 0 Source: NWS Storm Survey

This is the first segment of a two segment tornado. The tornado developed on Spavinaw Hill southwest of Spavinaw. It moved east-northeast snapping or uprooting numerous trees and snapping power poles through town. Some homes in town received roof damage. The tornado snapped or uprooted numerous trees along Highway 20 northeast of Spavinaw and damaged the roofs of a couple homes. The tornado crossed into Delaware County just north of Highway 20. Based on this damage, maximum estimated wind in this segment of the tornado was 100 to 110 mph.

DELAWARE COUNTY --- 2.0 W CHLOETA [36.42, -95.01], 1.6 E TOPSY [36.45, -94.94]

05/29/15 13:39 CST 10K Tornado (EF1, L: 4.10 mi, W: 1500 yd)

05/29/15 13:47 CST 0 Source: NWS Storm Survey

This is the second segment of a two segment tornado. The tornado crossed into Delaware County just north of Highway 20. Trees were snapped or uprooted and power poles were blown down as it moved east-northeast across the S 510 and S 520 Roads before dissipating. Based on this damage, maximum estimated wind in this segment of the tornado was 95 to 105 mph.

DELAWARE COUNTY --- 1.6 WSW CHLOETA [36.41, -95.00]

An upper level disturbance moved through the Southern Plains on the 29th. Thunderstorms developed over eastern Oklahoma during the late morning and afternoon hours as this system approached. Three tornadoes occurred as these storms moved through the

region as well as locally heavy rainfall that resulted in flash flooding.

	05/29/15 14:30 CST		0	Flood (due to Heavy Rain)
	05/31/15 09:00 CST		0	Source: Official NWS Observations

The Kiamichi River near Antlers rose above its flood stage of 25 feet at 3:30 pm CDT on May 29th. The river crested at 31.30 feet at 8:30 am CDT on the 30th, resulting in moderate flooding. Agricultural land was flooded and campgrounds on the west bank of the river were inundated near Moyers. The river fell below flood stage at 10:00 am CDT on the 31st.

Several periods of widespread, heavy rain occurred on May 28th and 29th. This resulted in moderate flooding of the Kiamichi River near Antlers.
