Strong thunderstorm wind blew down a tree onto a house.

Severe thunderstorms developed over western Oklahoma during the afternoon of the 6th, as a dry line sharpened over the area. These storms developed eastward across central and eastern Oklahoma during the late afternoon through evening hours, and evolved into a squall line before moving through northwestern Arkansas during the early morning hours of the 7th. The combination of strong instability ahead of the line of thunderstorms, and very strong deep-layer and low-level wind shear resulted in several tornadoes developing as the thunderstorm line moved through the area. One of the tornadoes became strong as it moved across portions of Washington County. Damaging wind gusts and large hail to quarter size also occurred with the squall line.

Severe thunderstorms developed over western Oklahoma during the afternoon of the 25th, along a sharpening dry line, and moved east across Oklahoma during the evening, and across northwestern Arkansas during the early morning hours of the 26th. The atmosphere east of the dry line across Oklahoma and western Arkansas was moist and very unstable. Wind fields above the ground and deep layer wind shear strengthened during the afternoon through the early morning hours of the 26th, as an upper level disturbance translated into the Southern Plains. Additionally, low level wind shear increased late in the evening and continued very strong into the early morning hours of the 26th. These conditions were very supportive for the development of supercell thunderstorms. One of these supercells became particularly intense and long-tracked as it moved across northeastern Oklahoma and northwestern Arkansas, producing multiple tornadoes, several of which were strong. Large hail to baseball size and swaths of damaging straight-line wind also occurred, resulting in considerable damage.

An EF-3 tornado damaged or destroyed more than 60 homes and businesses near Decatur, Arkansas, and severely injured at least two people during the early morning hours of May 26, 2024. The damage path was about 1.8 miles wide at times, and resulted in extensive tree damage. Many power poles were snapped, and numerous outbuildings were also destroyed. Photo by Ed Calianese, WCM, NWS Tulsa Oklahoma.

A kayaker launched into Little Sugar Creek in Bella Vista, and was drowned in the dangerously high and fast water flow. Search and rescue efforts recovered his body on the 28th, when the water flow became safe enough to deploy boats to aid in the search, which up until then had only involved a foot search, ATVs, and drones along the creek.

Golf ball size hail damaged homes and vehicles.

Severe thunderstorms redeveloped across northeastern Oklahoma during the afternoon of the 26th, ahead of an approaching cold front. These storms moved across northwestern Arkansas during the early evening. Strong instability and strong deep layer wind shear promoted the development of supercell thunderstorms, the strongest of which produced large hail up to golf ball size and damaging wind gusts.

OKLAHOMA, Eastern

OTTAWA COUNTY --- 2.9 ENE NARCISSA [36.81, -94.88], 3.0 NNE OTTAWA [36.89, -94.78], 3.6 WNW CARDIN [36.99, -94.91], 13.1 WNW NORTH MIAMI [36.99, -95.10]

05/01/24 00:00 CST	0	Flood (due to Heavy Rain)
05/04/24 06:00 CST	0	Source: Official NWS Observations

The Neosho River near Commerce rose above its flood stage of 15 feet at 5:30 pm CDT on April 28th. The river crested at 20.16 feet at 11:00 pm CDT on May 2nd, resulting in moderate flooding. Riverview Park in Miami was flooded, and considerable agricultural flooding occurred. Portions of Highway 125 were flooded and closed. The river fell below flood stage at 7:00 am CDT on May 4th.

Several days of reoccurring thunderstorm activity across northeastern Oklahoma and southeastern Kansas during late April resulted in widespread rainfall totals of three to eight inches across the area. This multi-day, widespread heavy rainfall resulted in moderate flooding along the Neosho River at Commerce, which began April 28th, and continued into early May.

This is the first segment of a two-segment tornado. This tornado developed just west of the S 4735 Road, where trees were snapped and uprooted. It moved east-northeast, and produced extensive tree damage for about a mile and a half before crossing into Arkansas , just north of the Washington/Crawford County border. A tornadic debris signature was detected by the KSRX WSR-88D with this tornado. Based on this damage, maximum estimated wind in this segment of the tornado was 110 to 120 mph.

LE FLORE COUNTY ARKOMA [35.35, -94.45]			
	05/07/24 01:40 CST	0	Thunderstorm Wind (EG 65 kt)
	05/07/24 01:40 CST	0	Source: Emergency Manager

Strong thunderstorm wind blew down trees.

Severe thunderstorms developed over western Oklahoma during the afternoon of the 6th, as a dry line sharpened over the area. These storms developed eastward across central Oklahoma during the afternoon, and then moved into eastern Oklahoma during the evening. Very strong instability developed ahead of the storms, and wind shear became very strong during the mid to late evening, as wind fields strengthened over the region with the approach of a strong upper level disturbance. As a result of this very strong instability and wind shear, supercell thunderstorms evolved as the storms moved east of the dry line. Strengthening low level wind shear promoted the development of tornadoes, one of which became violent as it moved through Osage County. Large hail up to golf ball size and damaging wind gusts also occurred.

A squall line organized as the storms moved into eastern Oklahoma, with several supercells maintaining their structure within the squall line. Damaging wind gusts, large hail to quarter size, and several tornadoes occurred with the squall line as it moved through the area into the early morning of the 7th. One tornado became strong as it moved across portions of Adair County. Locally heavy rainfall resulted in some flash flooding.

An EF-4 tornado destroyed more than 65 homes and businesses, and damaged at least 50 others, in Barnsdall, Oklahoma during the late evening hours of May 6, 2024. Two people were killed by the tornado, and at least 33 others were injured. The tornado then moved through Bartlesville, Oklahoma, damaging or destroying an estimated 1000 homes and businesses, before dissipating northeast of town. Photo by Ed Calianese, WCM, NWS Tulsa Oklahoma.

OTTAWA COUNTY 2.3 NNW NARCISSA [36.83, -94.95], 3.4 S MIAMI [36.83, -94.88]				
05/08/24 13:15 CST	50K	Tornado (EF1, L: 4.00 mi , W: 450 yd)		
05/08/24 13:23 CST	0	Source: NWS Storm Survey		

This tornado developed west of the S 520 Road and south of the E 130 Road. It moved east-northeast across Highway 69, then appeared to briefly move to the southeast, and then back to the east as it moved generally along the E 130 Road to where it likely dissipated, east of E St SW. Numerous trees were uprooted, a few homes were damaged, and an outbuilding was destroyed. Storm chasers observed this tornado. Based on this damage, maximum estimated wind in the tornado was 90 to 100 mph.

This is the first segment of a two-segment tornado. This tornado developed northeast of Owasso near Limestone, and moved east-southeast through Keetonville. Homes were damaged, outbuildings were destroyed, and numerous trees were snapped or uprooted. The tornado turned to the east-northeast as it approached Claremore, where numerous homes and businesses were damaged or destroyed, and numerous trees and power poles were blown down. It blew a large portion of the roof from Will Rogers Downs on the east side of town, and destroyed numerous recreational vehicles at a park near the Downs. The tornado continued to move east, then northeast, as it moved away from Claremore and toward the Rogers/Mayes County line. Numerous homes were damaged or destroyed between Claremore and the county line. Numerous outbuildings were destroyed, and many trees and power poles were blown down. In total, more than 40 homes and businesses were destroyed by the tornado, and about 1200 others were damaged. Nineteen injuries occurred in Rogers County from the tornado. Based on this damage, maximum estimated wind in this segment of the tornado was 145 to 155 mph. The tornado continued into Mayes County.

This is the second segment of a two-segment tornado. The tornado moved into Mayes County at about the W 470 Road, and continued to produce significant damage, snapping many trees at the county line. As it moved east-southeast, the tornado destroyed a mobile home less than a mile east of the county line, where two fatalities and four injuries occurred. The tornado destroyed several homes near the N 428 Road, about four miles northwest of Pryor, and then dissipated about two miles northwest of Pryor. In total, about 60 homes were damaged, eighteen of which were destroyed, more than 50 outbuildings were destroyed, and many power poles were blown down. Based on this damage, maximum estimated wind in this segment of the tornado was 145 to 155 mph.

Direct Fatalities: F61MH, F35MH

MAYES COUNTY 1.6 NW SALINA [36.32, -95.17], 5.0 E SALINA [36.30, -95.06]

This tornado developed over Lake Hudson and moved generally east-southeast. Numerous trees were snapped and uprooted, about 30 homes were damaged, one of which was destroyed, more than 30 outbuildings were destroyed, and power poles were snapped along its path from the lake shore to near Kenwood Road. It produced a tornadic debris signature from the KINX WSR-88D. Based on this damage, maximum estimated wind in the tornado was 105 to 110 mph.

MAYES COUNTY 0.5 W SALINA [36.30, -95.16], 2.0 ESE LAKE HUDSON [36.27, -95.14]					
05/25/24 23:25 CST	3.75M	Tornado (EF1, L: 2.40 mi , W: 300 yd)			
05/25/24 23:30 CST	0	Source: NWS Storm Survey			

This tornado developed just north of Salina, and moved south-southeast across town, dissipating over an inlet of Lake Hudson. The tornado damaged about 40 homes and businesses, of which seven were destroyed, damaged more than a dozen government and commercial buildings, destroyed about twenty outbuildings, uprooted and snapped trees, and blew down power poles. It produced a tornadic debris signature from the KINX WSR-88D. Based on this damage, maximum estimated wind in the tornado was 95 to 105 mph.

DELAWARE COUNTY 4.1 ESE KENWOOD [36.30, -94.91], 4.3 SSW EUCHA [36.32, -94.89]					
05/25/24 23:36 CST	0	Tornado (EF1, L: 1.80 mi , W: 650 yd)			
05/25/24 23:39 CST	0	Source: NWS Storm Survey			

This tornado developed over rugged terrain near Bull Hollow, moved across County Road 546, where trees were uprooted, and then moved northeast and dissipated before reaching County Road 487. It produced a tornadic debris signature from the KINX WSR-88D. Based on this damage, maximum estimated wind in the tornado was 90 to 100 mph.

DELAWARE COUNTY 1.3 WSW COLCORD [36.26, -94.70], 3.9 E ROW [36.29, -94.61]				
05/25/24 23:51 CST	0.10M	Thunderstorm Wind (EG 74 kt)		
05/25/24 23:58 CST	0	Source: NWS Storm Survey		

Strong thunderstorm wind uprooted trees, snapped large tree limbs, damaged the roofs of homes, blew down power lines, and destroyed outbuildings in a broad swath from west of Colcord to west of Cherokee City, AR.

Deaths & Injuries Property & Crop Dmg Event Type and Details

Severe thunderstorms developed over western Oklahoma during the afternoon of the 25th, along a sharpening dry line, and moved east across Oklahoma through the evening and into the early morning hours of the 26th. The atmosphere east of the dry line across Oklahoma was moist and very unstable. Wind fields above the ground and deep layer wind shear strengthened during the afternoon through the early morning hours of the 26th, as an upper level disturbance translated into the Southern Plains. Additionally, low level wind shear increased late in the evening and continued very strong into the early morning hours of the 26th. These conditions were very supportive for the development of supercell thunderstorms. One of these supercells became particularly intense and long-tracked as it moved across northeastern Oklahoma and northwestern Arkansas, producing multiple tornadoes, several of which were strong. Large hail to base ball size and swaths of damaging straight-line wind also occurred, resulting in considerable damage.

An EF-3 tornado destroyed more than 70 homes and businesses, and damaged at least 1200 others, in Rogers and Mayes Counties, during the late evening of May 25, 2024. Two people were killed by the tornado, and at least 23 others were injured. Damage to trees and power poles was extensive. Photo by Ed Calianese, WCM, NWS Tulsa Oklahoma.

Golf ball size hail damaged homes and vehicles.

Severe thunderstorms redeveloped across northeastern Oklahoma during the afternoon of the 26th, ahead of an approaching cold front. Strong instability and strong deep layer wind shear promoted the development of supercell thunderstorms, the strongest of which

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details

produced large hail up to hen egg size.
