Data Valid: 08/20/24

Precipitation: Last 30 Days

- Much of the area had below normal precipitation over the past 30 days.
- Portions of northeastern Wyoming were significantly below average over the past 30 days.
- The lack of precipitation over the past 30 days has begun to impact portions of south-central South Dakota as seen on the 30-Day Percent of Normal Precipitation graphic to the right.

Summary of Impacts

Links: See/submit [Condition Monitoring Observer Reports \(CMOR\)](#) and view the [Drought Impacts Reporter](#)

Hydrologic Impacts

- Most streams and rivers are below normal to normal for this time of the year. Additional information from the USGS may be found [here](#).

Agricultural Impacts

- USDA Crop Progress and Condition reports: [South Dakota](#) and [Wyoming](#).

Fire Hazard Impacts

- Please visit [Great Plains Fire Information](#) for the latest fire restrictions.

Other Impacts

- Current 100- and 1000-hr fuels are very dry and herbaceous fuels continue to dry down and cure. Even with ample precipitation the warm-season grasses will struggle to come back.

Mitigation Actions

- Rapid City's annual mandatory water conservation measure continues through August 31.
- Gillette's water waste ordinance continues through October 1.

Drought Outlook

The latest monthly and seasonal outlooks can be found on the [CPC homepage](#)

- Drought conditions are expected to further develop or persist over all of northeastern Wyoming and portions of western South Dakota.
